ARBORETUM ET FRUTICETUM BRITANNICUM;

OR,

THE TREES AND SHRUBS OF BRITAIN,
Native and Foreign, Hardy and Half-Hardy,
PICTORIALLY AND BOTANICALLY DELINEATED,
AND SCIENTIFICALLY AND POPULARLY DESCRIBED;

WITH

THEIR PROPAGATION, CULTURE, MANAGEMENT,
AND USES IN THE ARTS, IN USEFUL AND ORNAMENTAL PLANTATIONS, AND IN
LANDSCAPE-GARDENING;

PRECEDED BY A HISTORICAL AND GEOGRAPHICAL OUTLINE
OF THE TREES AND SHRUBS OF TEMPERATE CLIMATES
THROUGHOUT THE WORLD.

BY J. C. LOUDON, F.L. & H.S. &c.

AUTHOR OF THE ENCYCLOPÆDIAS OF GARDENING AND OF AGRICULTURE.

IN EIGHT VOLUMES:

FOUR OF LETTERPRESS, ILLUSTRATED BY ABOVE 2500 ENGRAVINGS;
AND FOUR OF OCTAVO AND QUARTO PLATES.

~~~~~  
VOL. I.

HISTORY, GEOGRAPHY, AND SCIENCE; AND DESCRIPTIONS, FROM  
RANUNCULA'CEÆ TO STAPHYLEA'CEÆ, P. 494., INCLUSIVE.

---

SECOND EDITION.

LONDON:

PRINTED FOR THE AUTHOR;

AND SOLD BY

LONGMAN, BROWN, GREEN, AND LONGMANS;

THE PARTIALLY COLOURED AND COLOURED COPIES, BY  
JAMES RIDGWAY AND SONS.

1844.

ARBORETUM ET FRUITICULTUM  
BRITANNICUM:

THEIR PROPAGATION, CULTURE, MANAGEMENT,  
AND HOW IN THE ARTS IS EMPLOYED AND ORGANIZED PLANTATIONS, AND IN

LANDSCAPE-GARDENING;

PREPARED BY A HISTORICAL AND GEOGRAPHICAL OUTLINE  
OF THE TREES AND SHRUBS OF TEMPERATE CLIMATE  
THROUGHOUT THE WORLD.

BY J. C. LINDLEY, F.R.S., &c.

ASSISTED BY THE REV. J. C. LINDLEY, F.R.S., &c.

IN EIGHT VOLUMES.

THE FIRST VOLUME, ILLUSTRATED BY ABOUT 2500 ENGRAVINGS,  
AND NOW IN PRESS AND ABOUT TO BE PUBLISHED.

VOL. I.

HISTORY, GEOGRAPHY, AND CLIMATE; AND DESCRIPTIONS, FROM  
LINDLEY'S TO STAPLETON'S, &c. &c. &c.

SECOND EDITION

THE PATENT OFFICE, LONDON.

Printed by A. SPOTTISWOODE, 111,  
New-Street-Square.

# PREFACE

TO

## THE SECOND EDITION.

---

WHEN the *Arboretum Britannicum* was first published it appeared in Numbers; and, as all the trees were drawn from nature, they were published as they could be obtained, blanks being left for those of which good specimens could not be found. These blanks were afterwards, in most cases, filled up; but sometimes it was discovered that different names had been given to the same plant, and consequently that there was only one tree to fill up the spaces that had been left for two names; while, in other cases, the same tree was found so different at different periods of its growth, as to render two or more plates of it desirable. These circumstances occasioned many inaccuracies in the plates, which were noticed in the errata; but shortly previous to Mr. Loudon's death he had all these faults corrected, preparatory to a new impression of the plates being printed off; and it is this corrected edition that is now offered to the public.

J. W. LOUDON.

*Bayswater, March 7. 1844.*

# PREFACE

## THE SECOND EDITION.

When the *Aboriginal Vocabulary* was first published it appeared in  
two parts and as all the trees were drawn from nature, they were published  
as they could be obtained, blank being left for those of which specimens  
could not be found. These blanks were afterwards, in most cases,  
filled up; but sometimes it was observed that different names had been  
given to the same plant, and consequently that there was only one tree to  
fill up the space that had been left for two names; while in other cases, the  
same tree was found to different periods of its growth, as to  
which two or more plates of it described. These circumstances necessitated  
many changes in the plates which were noticed in the text; but  
absolutely previous to Mr. Latham's death he had all these changes corrected,  
preparing to a new impression of the plates being printed off, and it is  
this corrected edition that is now offered to the public.

H. W. Latham.

LONDON: Printed by J. G. ALLEN, 1844.

## P R E F A C E.

---

THE main object which induced the author to undertake this Work was, the hope of diffusing more generally, among gentlemen of landed property, a taste for introducing a greater variety of trees and shrubs in their plantations and pleasure-grounds. He had observed, for a number of years, that, though many new and beautiful trees and shrubs were annually introduced from foreign countries into our botanic gardens and nurseries, yet the spread of these plants in the grounds of country residences was comparatively slow; and that not only the new sorts were neglected, but many of the fine old species and varieties, which had been in British nurseries for upwards of a century, were forgotten by planters, and had ceased to be propagated by commercial gardeners. In short, it appeared to the author, that the general taste of the country for trees and shrubs bore no just proportion to the taste which prevailed in it for fruits, culinary productions, and flowers. It also appeared to him, that, while the numerous horticultural societies now established in the British Islands had powerfully promoted the general taste for horticultural and floricultural productions, they had rather neglected arboriculture and landscape-gardening.

Viewing trees and shrubs as, next to buildings, the most important ornaments which can be introduced into a country; and considering them, in this respect, greatly superior to herbaceous plants, from the little care that trees and shrubs require when once properly planted, and their magnitude, and permanent influence when grown up, on the general scenery of the country; the author felt desirous of pointing out the great importance of their more general distribution and culture. In order to impress this on the minds of proprietors and their families, and especially on the rising generation among them, he thought it best to adopt, as the main feature of his plan, the description and portraiture of such species and varieties of trees and shrubs as are actually in cultivation in the country, and as grow vigorously in it; referring to gardens or grounds within a limited distance of London, where these species or varieties may be seen in a living state, and to nurseries where they are propagated for sale, and stating the price for which they might be purchased in England, in France and Germany, and in North America. He has thought it advisable to give, not only botanical specimens, but portraits of the greater number of species of trees; in order, by a palpable representation of their forms and magnitudes, to make a stronger impression on the mind of the reader. These pictorial illustrations are of two kinds: first, portraits of trees of ten or twelve years' growth, taken from specimens growing in 1834, 1835, or 1836, within ten miles of London, and all drawn to the same scale of 1 in. to 4 ft.; and, secondly, of full-grown trees, also all drawn to one scale, viz. 1 in. to 12 ft., and for the most part growing within the same distance of London.

The use of the first class of portraits is, to give a palpable idea of the general magnitude, form, and character, which different species and varieties assume when growing in the same soil and climate, even in so short a period as ten or twelve years after planting. A slight comparative view of these portraits shows that the growth of some trees is much more rapid than that of others; and that while the species of some genera when young are comparatively monotonous in their general form, those of the species of other genera of the same age have marked and characteristic features. Hence the valuable assistance afforded by such portraits in the choice of trees for the purposes of landscape-gardening. To solve the problem of ascertaining the species capable of producing any desired effect of wood, or of trees, in a given locality, and in a given time, it is only necessary to turn over the portraits which are contained in the last four volumes of this Work, and to select those species, the portraits of which exhibit trees of such forms and magnitudes as will produce the effect desired.

The second class of portraits represents full-grown trees of the same species as those of which portraits in their young state are given; and these, for the greater part, are drawn from trees within ten miles of London, and all, with one or two exceptions, are to one scale. The object in giving these portraits of full-grown trees is, to show the magnitude and character which particular species attain when they arrive at maturity, and to be a guide to the planter, not only in many particulars having reference to pictorial effect, but also with respect to the uses of trees as productive of timber, shelter, and shade.

These portraits of trees in their young and mature state, which are contained in the last four volumes, together with the engraved botanical specimens, and the scientific and popular descriptions contained in the four volumes of letter-press, are calculated, as the author thinks, to create that interest in trees and shrubs in those who have not previously paid much attention to the subject, to produce which, as already observed, has been his grand object in undertaking this Work.

In addition to the trees and shrubs which have been ten or twelve years in the country, and which are purchasable in British nurseries, those of more recent introduction, which are comparatively scarce, are also described or noticed; as are some which were introduced at former periods, and have been lost, and others which are known to botanists, but which have not yet been introduced.

Besides notices of new and little known hardy trees and shrubs, or of such as are described by botanists but not yet introduced, some attention has been paid throughout the Work to trees and shrubs which, though they will stand through the winter in mild seasons, without protection in favourable situations, or with protection in situations and seasons less favourable, in the climate of London, yet cannot be recommended for general purposes, and are therefore generally described by gardeners as only half-hardy. These half-hardy species have been noticed, because there is perhaps no scene in a British garden more interesting, than one in which the plants of warm

countries, usually seen in green-houses or conservatories, appear in a flourishing state in the open air ; and also because the culture and management of such plants call forth a higher degree of scientific knowledge and attention on the part of the gardener, and therefore contribute to his improvement and consequent usefulness. Half-hardy trees and shrubs of the more tender kinds are generally cultivated against what is in this Work called a conservative wall ; that is, a wall which may be flued or not according to circumstances, but which admits of putting up a temporary projecting roof, or some other means of protection, during the winter season. Such walls are at present not very generally in use for ornamental exotics ; but so great are the interest and beauty which they are calculated to display when properly designed, planted, and managed, that in a few years they will probably be as general as fruit walls ; and, as ornaments to a country residence, connected with the flower-garden and shrubbery, will be considered as ranking next to the conservatory and the green-house.

Having given this notice of the objects which have led to the undertaking of this Work, and a general outline of the plan pursued in it, the reader is referred to the Introduction, and to the Explanatory References which precede the Table of Contents, for further details.

The engraving and printing of this Work, for which collections had been making for several years (see the *Gardener's Magazine*, vol. vi., for 1830, p. 582. and p. 718.), was begun in August, 1834 ; and it has been published in Numbers, the first of which appeared in January, 1835, and the 63d and last on the 1st of July, 1838. It was originally intended to include in it a generalisation of the whole subject of the trees and shrubs of temperate climates ; but, finding the Work had increased to more than double the extent originally contemplated, it has been thought advisable to publish the generalisation alluded to separately ; and it will accordingly appear at some future time, in one volume, under the title of an *Encyclopædia of Arboriculture*.

It now remains for the author to acknowledge his obligations to the numerous persons who have given him information for this Work. He refers to the List of Contributors, p. xv., and to every individual there named he begs to return his most sincere thanks. He thanks, in a more particular manner, the Council of the Horticultural Society of London, for having granted him permission to take portraits of the trees in the Society's Garden, and to examine and make drawings from the botanical specimens sent home by Douglas and others, in their herbarium ; as well as for the information communicated by their head gardener, Mr. Munro, and the foreman of their arboretum, Mr. Gordon. The author is deeply indebted to Messrs. Loddiges, with reference to their arboretum at Hackney, and for the kind and liberal manner in which they have at all times, during the last ten years, since he began to prepare for this Work, not only allowed him to send artists to make drawings, and supplied him with specimens, but permitted him to select these himself ; and, in short, to use their unrivalled collection of hardy trees and shrubs as if it had been his own. To the Linnean Society, and their librarian, Professor Don, the author is much indebted for the loan of books, and for permission to examine

the specimens of trees and shrubs in the Linnean herbarium; as he is to A. B. Lambert, Esq., V.P.L.S., &c., for the use of his magnificent library and unique herbarium, and for the living specimens of the *Coníferæ* from Boyton; and to W. T. Aiton, Esq., F.L.S., H.S., &c., Her Majesty's Garden-Director at Kew, for specimens of the trees and shrubs in the arboretum there, for the loan of manuscripts, and for other valuable information and assistance, communicated either directly by himself, or through that scientific and assiduous botanist and cultivator, Mr. Smith, foreman of the Kew Botanic Garden.

To His Grace the Duke of Northumberland the author is indebted, not only for access for himself and artists to examine and take portraits of the splendid exotic trees at Syon, but for drawings of upwards of a hundred of the largest and rarest of those trees, made for this Work by G. R. Lewis, Esq., at His Grace's expense, and also for engravings from several of the largest of these drawings. To Mrs. Lawrence of Studley Royal he is obliged for the portraits of many of the noble trees in the park at Studley, that lady having employed a London artist, H. W. Jukes, Esq., for several months for that purpose; and to the Rev. J. Charnock, for directing the measurements, and supplying interesting information respecting those trees. To the Countess of Bridgewater he is indebted for portraits of the gigantic beeches at Ashridge: and to Lady Grenville, for permission to take drawings, and for numerous specimens of the *Abiétinæ* in the magnificent pinetum at Dropmore; and to Her Ladyship's intelligent and most industrious gardener, Mr. Frost, for supplying valuable information respecting their culture and management, and for lending every assistance in his power. Portraits of trees, and many specimens, have also been sent by various other persons in different parts of Great Britain and Ireland, whose names, lest any individual should be by chance omitted, it is not endeavoured here to enumerate.

The author is also indebted, for portraits, specimens, and information, to various amateurs and gardeners on the Continent, as well as to correspondents in North America and Australia; and more especially to M. Alphonse De Candolle of Geneva; to M. André Michaux, M. Vilmorin, M. Loiseleur Deslongchamps, and M. Soulange-Bodin, of Paris; to Baron Jacquin, and M. Charles Rauch, of Vienna; to Professor Reinwardt, Leyden; Professor Kops, Utrecht; M. Otto, Berlin; Messrs. Booth, Hamburg; Professor Schouw and M. Petersen, Copenhagen; Bishop Agardh, Carlstadt, Sweden; Dr. Fischer, Petersburg; M. Fintelman, Moscow; M. Descemet, Odessa; Sr. G. Manetti, Monza, near Milan; the Honourable Keppel Craven, Naples; Dr. Mease, Philadelphia; Col. Carr, of Bartram's Botanic Garden; and John Thompson, Esq., Surveyor General's office, Sydney.

In the literary department the author received the assistance of the Rev. M. J. Berkeley, M.A., F.L.S., for the lists of Fungi inhabiting different species of trees; of J. O. Westwood, Esq., F.L.S., Secretary to the Entomological Society, for descriptions and drawings of the Insects infesting different species; of Wm. Spence, Esq., F.L.S., and of M. Audouin, Member of the Institute of France, and Professor of Entomology, for information respecting the species of *Scólytus* injurious to the elm; of Mr. John Denson, A.L.S., in drawing up

the characters of the Orders and Genera, and generally for what may be considered the botanical department of this Work, from its commencement to the end of the genus *Salix*. He is, also, indebted to W. Withers, Esq., of Holt, Norfolk, for the loan of his unpublished work on the *Robinia Pseud-Acacia*; to W. Borrer, Esq., F.L.S., for the arrangement into groups of the numerous species of the difficult genus *Salix*, and for looking over the proof sheets of the article on that genus; to Professor Alphonse De Candolle, for looking over the proof sheets of the article on *Salisbùria*, as well as for examining the proofs of the history of trees in France and Switzerland; to M. Vilmorin, for looking over the proof sheets of the history of trees and shrubs in France; to the late M. Fischer, of the Botanic Garden, Göttingen, and to M. Otto, of Berlin, for looking over the proof sheets of the history of trees in Germany; to Professor Don, for arranging and looking over the whole of the generic characters, and some of the proof sheets, of the *Coníferæ*; and to Mr. Gorrie, for examining the proof sheets of the article on the Larch.

To His Grace the Duke of Bedford the author is indebted for much valuable information on the subject of trees, and more especially respecting the Oak, the Scotch Pine, and the Cedar of Lebanon, communicated either directly by His Grace, or through his forester at Woburn Abbey, Mr. Ireland; as well as for permission (of which he has availed himself) to make whatever use he chose of that magnificent work the *Salictum Woburnense*. To the Duke of Richmond, the Earl of Aberdeen, Macpherson Grant, Esq., and Mr. Grigor, of Forres, he is indebted for important communications respecting the Scotch Pine in Scotland; to the Duke of Portland for various researches respecting the Oak in Nottinghamshire; and to the Earl of Wicklow, Earl Roden, Lord Viscount Ferrard, Sir Robert Bateson, Mr. Mackay, and Mr. Niven, for information respecting the trees and shrubs of Ireland.

The author, in conclusion, has only to request that the readers of this Work will send to him whatever corrections, additions, or suggestions may occur to them on its perusal, or at any future period. It is his intention to publish whatever additional matter he may receive from correspondents, or procure himself, in an Annual Report in the *Gardener's Magazine*; and to include in this report notices of all the trees and shrubs which may, during the year, have been introduced from foreign countries, or originated in this country from intentional hybridisation or accident. This report will also include such improvements as may from time to time be made in arboricultural nomenclature, such as the re-arrangement of the species of a genus, &c.; and, in short, every thing that may be found requisite to keep up the information contained in the *Arboretum et Fruticetum Britannicum*, with the actual progress of knowledge on the subject. The essence of these annual reports will be collected from time to time, and published in pamphlets, as supplements to the *Arboretum*; so that the possessor of this first edition may have it in his power, at any future time, to bring the Work down to the latest date, without being under the necessity of purchasing a new edition.

J. C. L.

Bayswater, May 20. 1838.

## DIRECTIONS TO THE BINDER.

THE Work is to be done up in Eight Volumes: the first Four of Letter-press, and the last Four of Plates.

Vol. I. is to contain the Dedication, Preface, Contents, &c., of the eight volumes, and the text as far as p. 494. inclusive. A Table of the Contents of Vol. I. is to be placed immediately before the Introduction; and the first part of this table being systematic, and the second part alphabetical, an index at the end of the volume is unnecessary. The Signatures at the beginning of the volume run thus:—A, [A], a, a to d d, \* B, c, &c., in the regular series.

Vol. II. commences with p. 495., and ends with p. 1256. There is a Title, with a Table of Contents on the same plan as in Vol. I.

Vol. III. commences with 1257., and ends with p. 2030.; having a Table of Contents, &c., as in Vol. I.

Vol. IV. commences with p. 2031., and contains the remaining part of the text; with a Table of Contents, &c., as in Vol. I., at the beginning, and three Alphabetical Indexes at the end.

Vol. V. commences with *Magnòlia grandiflòra*, and ends with *Acàcia dealbàta*. There is a Title, with a Table of Contents arranged on the same plan as that given in the preceding volumes.

Vol. VI. commences with *Amýgdalus commùnis*, and ends with *O'rnus europæ'a*, full-grown tree. Title, Contents, &c., as in preceding volumes.

Vol. VII. commences with *Catálpa syringæfòlia*, and ends with *Quércus álba*. Title, Contents, &c., as before.

Vol. VIII. commences with *Quércus macrocárpa*, and ends with *Juníperus excélsa*; and has Title, Contents, &c., as before. At the end of this volume there is an Alphabetical Index to the Four Volumes of Plates.

\*\*\* A List of the Plates, in the order in which they are to be bound up, is given in the Table of Contents, p. cliv. to clxi. in Vol. I.

The *Cancels* given in order to introduce corrections, &c., are the following:—

### TEXT.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

Immediately after the Titlepage of each Volume (except Vol. I.), a Table of the Contents is given, first systematically arranged, and next alphabetically.

A Table of the Contents of Vol. I. will be found from p. ccxxvii. to p. ccxxx.

## ARRANGEMENT OF THE ALPHABETICAL INDEXES.

- Alphabetical Index of Genera is given at the end of Vol. IV. p. 2655.
- Alphabetical Index of miscellaneous Subjects, at the end of Vol. IV. p. 2667.
- Alphabetical Index of Persons and Places, at the end of Vol. IV. p. 2672.
- Alphabetical Index of the Portraits of Trees given in the last Four Volumes, at the end of Vol. VIII.

## EXPLANATORY REFERENCES.

---

THE greater part of the letterpress of this Work consists of the description, history, geography, uses, propagation, culture, &c., of the species and varieties of the trees and shrubs cultivated in the British Islands; and this is always printed in type corresponding in size with that used in this sentence.

The short descriptive notices of species and varieties which it would be desirable to introduce, of such as have been introduced and lost, of such as have not been seen by the author, even though mentioned in British catalogues, and of such as are half-hardy in the climate of London, or supposed to be so, are uniformly printed in a smaller type.

The statistics, or accounts of the dimensions of trees, which we have received from different parts of the British Islands or the Continent, are also in small type, in order to save room.

The portraits of trees which form the last four volumes are sometimes, referred to as in the second volume, and sometimes as in the last volume. These references were made under the idea of binding up all the letterpress in one volume, and all the plates in another, which, now that the Work is finished, is found to be impracticable. The readiest way of finding the portrait of any particular species of tree is, to refer to the Alphabetical Index of Portraits of Trees, given at the end of the eighth volume. The readiest way of finding the description and history of any particular species or variety, and of ascertaining whether or not a figure is given of it, is by referring to the general Alphabetical Index, at the end of the fourth volume.

In various parts of the Work reference will be found to Part IV., and to the *Encyclopædia of Arboriculture*. These two references refer to one and the same work, viz. the *Encyclopædia of Arboriculture*, which it was originally intended to include in the *Arboretum Britannicum*, but which, for the reasons stated in the Preface, will now be published separately in one volume; and in which the subject of trees and their culture will be generalised, and their mode of treatment given *en masse*, whether as seedlings in the nursery, as useful and ornamental plantations, as yielding timber and other useful products, or as ornaments in the lawn and shrubbery.

The engravings of the botanical specimens, whether printed along with the text, or along with the portraits of the trees in the four last volumes, are invariably to one and the same scale of 2 in. to 1 ft. Where any portion of the plant is given of the natural size, it is distinguished by a cross, thus, +. Where dissections are given, *m.* signifies male, *f.* female, and *mag.* magnified.

The portraits of the entire trees and shrubs given along with the text are to different scales, which are always indicated in the descriptions: they are chiefly 1 in. to 12 ft., 1 in. to 24 ft., and 1 in. to 50 ft.

The portraits of the trees in the last four volumes are nearly all from individuals that were growing within ten miles of London, in the years 1834, 1835, 1836, or 1837. These portraits are chiefly of young trees, of ten or twelve years' growth, and are drawn to a scale of 1 in. to 4 ft.: but there are also portraits of full-grown trees, of all the principal kinds of which full-grown specimens are to be found within ten miles of London (taken chiefly from Syon), and these are drawn to a scale of 1 in. to 12 ft.

Of some species of trees good full-grown examples could not be found within ten miles of London; and of these portraits have been taken from trees growing in different parts of Great Britain (particularly from Studley Park and Dropmore) and Ireland, and, in one or two instances, from trees on the Continent.

The botanical specimens of the young trees exhibit a branch in flower, the winter's wood when the tree is deciduous, and a branch with ripe fruit, and with

the autumnal leaves; besides dissections of the flowers and fruit. These were all drawn on purpose for this Work, and, with a few exceptions, by J. D. C. Sowerby, Esq., F.L.S., &c. See this subject further explained in p. 223.

The specimens of foliage placed at the bottom of the plates of the full-grown trees may be called "artist's foliage," rather than "botanical specimens." They are, for the most part, drawn by the artist who took the portrait of the tree (generally no botanist, and who only knew the artistical differences in the aspect of trees), in order to get a more correct idea of what is called the "touch."

The portraits of all the trees, both young and full grown, were taken chiefly during the months of August, September, and October; but a number were also taken during the winter season, in order to show the skeleton tree without its foliage; several species being as readily known, even to a general observer, when they are naked, as when they are clothed with leaves.

All the engravings of trees and shrubs given in this Work, whether along with the text, or in the last four volumes, have been drawn from nature, on purpose for it, by competent artists, whose names, as well as the names of the places, where the trees are now growing, or grew when their portraits were taken, are given in the List of Trees in the Table of Contents, p. cliv.; and the greater number of the original drawings may still be seen in the possession of the author.

In the descriptive part of this Work, under the titles of the chapters, and sometimes under those of the sections, are given signs, intended to show at a glance the general habit of the trees or shrubs described in that chapter or section. These signs represent large, small, and middle-sized plants, and are as follows; the first sign in each row indicating a deciduous tree or shrub, the next an evergreen, and so on alternately:—

1. Round-headed trees; such as the oak, ash, elm, beech, &c.

2. & 3. Spiry-topped trees; such as the spruce fir, larch, pine, deciduous cypress, &c.

4. Fastigate trees; such as the Lombardy poplar, cypress, &c.

5. Drooping trees; such as the weeping willow, weeping elm, &c.

6. Shrubs.

7. Under-shrubs

8. Twining shrubs; such as the honeysuckle, menispermum, aristolochia, &c.

9. Climbing shrubs; such as the clematis, ampelopsis, vine, &c.

10. Trailing shrubs, the branches of which lie prostrate on the ground, but do not root into it; such as many species of willow, *Cistus*, &c.

11. Creeping shrubs, or such as send up shoots from their creeping roots; as many species of *Spiræa*, &c.

The signs put before each individual species and variety which is described as enduring the open air in the climate of London, and in cultivation in British gardens, are the same as those used in the *Gardener's Magazine*, and in the *Hortus Britannicus*, viz.:—

☞ Deciduous tree.

♂ Evergreen tree.

☞ Deciduous shrub.

♂ Evergreen shrub.

☞ Deciduous under-shrub.

♂ Evergreen under-shrub.

☞ Deciduous twiner.

♂ Evergreen twiner.

☞ Deciduous climber.

♂ Evergreen climber.

☞ Deciduous trailer.

♂ Evergreen trailer.

☞ Deciduous creeper.

♂ Evergreen creeper.

The sign — (or —, indicating a greater degree of tenderness), added to any of the above signs in the Table of Contents, indicates that the tree or shrub, in the climate of London, requires protection during winter, but is considered likely to live against a conservative wall. Throughout the Work, wherever the dimensions of any tree or shrub are given, and the year when these dimensions were taken is not stated, the autumn of the year 1834, when the Work was commenced, is to be understood.

All the botanic names throughout the Work are accented, and have their origin indicated, as in the *Hortus Britannicus* and the *Gardener's Magazine*. The vowels which are sounded short are marked with an acute accent, thus (´), as A´ceras; and those which are sounded long are marked with a grave accent, thus (˘), as A˘brus. The origin of each name is indicated thus: where the name has been applied to a plant by the ancients, the first letter is in Italic, as *Pīnus*; where it is commemorative of some individual, the letters additional to the name are in Italic, as *Bánksia*, *Lambertiána*, *Douglàsii*; and where an aboriginal name has been adopted, or where the name is of uncertain derivation, the whole word is in Italic as, *Ailántus*, *Caragána*, &c. When the name would otherwise be in Italic, as in the case of synonymes, headings to paragraphs, &c., these distinctions are of course reversed, as *Pīnus*, *Bánksia*, *Ailántus*. All the other scientific names, generic or specific, are composed from the Greek or Latin, with the exception of a very few, which are taken from places: as *Araucária*, from the country of the Araucanians; *Quércus gramúntia*, from the estate of Grammont; *A˘cer monspeliénsis*, &c. Further details respecting the particulars entered into in classing, describing, and recording the trees and shrubs included in this Work, will be found in the Introduction, p. 1. to p. 14., and in Part II. Chap. IV. p. 222. to p. 230., which we recommend the reader to peruse with attention.

In the course of the Work, a few exceptions will be found to what is stated in these explanatory pages as general; but they are so very few as to be hardly worth notice; and the reasons for them will either be found given where they occur, or they are considered to be sufficiently obvious.

## LIST OF CONTRIBUTORS.

IN 1834, before the *Arboretum* was commenced, about three thousand printed lists of trees and shrubs, agreeable to the form shown in Appendix No. I., were put in circulation; and answers to these, or other information relating to trees and shrubs for this *Arboretum*, were received from the following persons:—

## A.

Aberdeen, George Earl of, F.R.S.,  
L.S., H.S., &c.  
Ackland, Sir T. D., Bart., M.P., F.  
H.S., &c.  
Agardh, D.C. A., Bishop of Carlstadt,  
F.L.S., &c.  
Agardh, jun., Professor of Botany,  
Lund.  
Aglionby, H. A., M.P., F.H.S., &c.  
Aiken, H.  
Aikin, A., M.D., F.G.S., &c.  
Ailsa, A. Marquess of, F.R.S., H.  
S., &c.  
Airlie and Lintrathen, D. O. Earl of.  
Aiton, W. T., F.L.S., H.S., &c.  
Albett, Josh.  
Alexander, J.  
Alsop, J.  
Amherst, W. P. A. Earl, P.C.  
Anderson, A.  
Anderson, G., F.H.S.  
Anderson, J., F.H.S., &c.  
Anderson, W., F.L.S., H.S.  
Andrews, M., F.H.S., &c.  
Argyll, G. W. Duke of.  
Arundel, H. B. Lord.  
Ashbury, W.  
Ashby, W. Ashby.  
Atkins, J.  
Atty, Geo.  
Audibert, M. Urban, C.M.H.S., To-  
nelle, near Tarascon.

## B.

Babington, C. C., M.A., F.L.S., &c.  
Backhouse, J., C.M.H.S., Sydney.  
Backhouse, Thos., C.M.H.S.  
Bagnold, Captain.  
Bagot, W. Lord, F.L.S., H.S., &c.  
Bailly de Merlieux, M.  
Baker, A. J. Creswell, F.H.S.

Baker, W. R., F.H.S.  
Balfour, W., C.M.H.S.  
Bankes, W. J., M.P.  
Barnes, Thomas.  
Barnet, James.  
Barron, W.  
Bateman, J., F.L.S., H.S., &c.  
Bateson, Sir Robert, M.P.  
Bath, Marquess of.  
Bauer, Francis, F.R.S., L.S.  
Baumann, N., Bollwyller.  
Baxter, W., A.L.S., F.H.S., &c.  
Baxter, W. H.  
Beaton, D.  
Bedford, John Duke of, F.L.S., A.  
S., H.S., &c.  
Belfield, F., jun.  
Bell, R.  
Bella, M., Grignon, near Versailles.  
Bennett, S., C.M.H.S.  
Bentinck, Lieut.-Col. H.  
Bentley, A. C.  
Bentley, M. C.  
Berkeley, Rev. M. J., M.A., F.L.S.  
Bethell, R., M.P., F.H.S., &c.  
Biggs, Arthur, F.L.S., F.H.S., &c.  
Bingham, M. C.  
Bishop, Thomas, C.M.H.S., C.H.S.,  
&c.  
Black, Dr.  
Black, James.  
Blackadder, W.  
Blaikie, T., C.M.C.H.S.  
Blair, Sir D. H.  
Blore, G.  
Bolton, Lady.  
Bond, John, F.H.S., &c.  
Booth, John, A.L.S., C.M.H.S., &c.  
Borrer, W., F.R.S., L.S., H.S.  
Bosch, J. W., C.M.H.S., Stuttgart.  
Bossin, M.  
Boulton, M.  
Bourgeois, M., Paris.  
Bourne, Frederick, F.H.S., &c.

- Bourne, W. Sturges, M.P., M.A., F.  
   R.S., Z.S., H.S., &c.  
 Bowens, J., F.H.S.  
 Bowes, J., F.H.S., &c.  
 Bowman, J. E., F.L.S.  
 Braithwaite, Edmund.  
 Braybroke, R. G. Lord.  
 Breadalbane, J. C. Marquess of.  
 Bree, Rev. W. T., A.M., C.M.H.S.,  
   &c.  
 Breese, J., C.M.H.S.  
 Brennan, D., C.M.H.S.  
 Britton, J., F.A.S., &c.  
 Bromfield, W. A., M.D., F.L.S., &c.

|                                                                                                                      | Contents. | Text.    |
|----------------------------------------------------------------------------------------------------------------------|-----------|----------|
| CHAP. III.                                                                                                           |           |          |
| History and Geography of the Trees and Shrubs of the Continent of Europe                                             | -         | xiv. 132 |
| SECT. I. Trees and Shrubs of France                                                                                  | -         | xiv. 132 |
| SECT. II. Trees and Shrubs of Holland and the Netherlands                                                            | -         | xiv. 143 |
| SECT. III. Trees and Shrubs of Germany and Hungary                                                                   | -         | xiv. 145 |
| SECT. IV. Trees and Shrubs of Denmark, Holstein, Sweden, Lapland, Finland, Iceland, Greenland, and the Faroe Islands | -         | xv. 153  |
| SECT. V. Trees and Shrubs of Russia and Poland                                                                       | -         | xv. 155  |
| SECT. VI. Trees and Shrubs of Switzerland                                                                            | -         | xv. 161  |
| SECT. VII. Trees and Shrubs of Italy, Greece, Spain, Portugal, and the Mediterranean Islands                         | -         | xv. 164  |
| SUBJECT. 1. Trees and Shrubs of Italy                                                                                | -         | xv. 168  |
| SUBJECT. 2. Trees and Shrubs of Spain and Portugal                                                                   | -         | xv. 170  |

|                                                                                                       | Contents. | Text. |
|-------------------------------------------------------------------------------------------------------|-----------|-------|
| SUBJECT. 3. Trees and Shrubs of Turkey and Modern Greece -                                            | xv.       | 171   |
| CHAP. IV.                                                                                             |           |       |
| Trees and Shrubs of Asia, Africa, America, and Australia, suitable for the Climate of Britain -       | xv.       | 172   |
| SECT. I. Trees and Shrubs of Asia suitable for Britain -                                              | xv.       | 172   |
| SECT. II. Trees and Shrubs of Africa suitable for Britain -                                           | xv.       | 177   |
| SECT. III. Trees and Shrubs of America suitable for Britain -                                         | xv.       | 173   |
| SUBJECT. 1. Trees and Shrubs of North America -                                                       | xv.       | 178   |
| SUBJECT. 2. Trees and Shrubs of South America -                                                       | xv.       | 185   |
| SECT. IV. Trees and Shrubs of Australia and Polynesia -                                               | xv.       | 185   |
| CHAP. V.                                                                                              |           |       |
| Literature of the Trees and Shrubs of Temperate Climates -                                            | xv.       | 187   |
| CHAP. VI.                                                                                             |           |       |
| Conclusion -                                                                                          | xvi.      | 190   |
| Part II. SCIENCE OF THE STUDY OF TREES -                                                              |           |       |
|                                                                                                       | xvi.      | 192   |
| CHAP. I.                                                                                              |           |       |
| Study of Trees Pictorially -                                                                          | xvi.      | 193   |
| SECT. I. Study of Forms -                                                                             | xvi.      | 193   |
| SECT. II. Study of Expression and Character -                                                         | xvi.      | 198   |
| SECT. III. Mode of drawing Trees from Nature, so as to give the Pictorial Expression of the Species - | xvi.      | 202   |
| CHAP. II.                                                                                             |           |       |
| Trees and Shrubs considered Botanically -                                                             | xvi.      | 211   |
| SECT. I. Classification -                                                                             | xvi.      | 211   |
| SECT. II. Distinction between Species and Varieties -                                                 | xvi.      | 212   |
| SECT. III. Mode of describing Trees and Shrubs -                                                      | xvi.      | 212   |
| CHAP. III.                                                                                            |           |       |
| Uses of Trees and Shrubs -                                                                            | xvi.      | 219   |

*Picea*, 2 sp. ; 4 pl.

*Larix*, 2 sp. ; 4 pl.

*Cedrus*, 1 sp. and 1 var. ; 5 pl.

*Abietinaæ, § Cupressinaæ.*

*Thuja*, 2 sp. ; 2 pl.

*Cupressus*, 2 sp. ; 1 pl.

*Taxodium*, 1 sp. ; 2 pl.

*Juniperus*, 3 sp. ; 5 pl.

# CONTENTS.

## INTRODUCTION.

Uses of Trees, 1. Ornaments, 2. Interchange of Trees, 3. Arrangement of the Work, 4.

## PART I.

### GENERAL OUTLINE OF THE HISTORY AND GEOGRAPHY OF THE TREES AND SHRUBS OF TEMPERATE CLIMATES.

#### CHAP. I.

Of the Knowledge of Trees and Shrubs which existed among the Nations of Antiquity, 15.

Sacred Trees, 15. Trees of the Egyptians and Persians, 16. Enumeration of the Species of Trees indigenous to Greece as given by Theophrastus, 17. Trees of the Romans, 19.

#### CHAP. II.

Of the History and Geography of the Trees and Shrubs now in the British Islands, 20.

SECT. I. Of the Native Trees and Shrubs of the British Islands, 20.

Trees found by Cæsar, 20. Trees, the indigeneness of which is considered doubtful, 21. Beech, Sweet Chestnut, English Elm, &c., 22. The Box, 25. Trees known to our Saxon Ancestors, 26. Enumeration of the Species and Varieties of Ligneous Plants included in the British Flora, from Smith and Hooker, 27. Classification of the Ligneous British Flora, according to height, habit, and popular character, 30.

SECT. II. Of the Foreign Trees and Shrubs introduced into the British Isles, 31.

SUBJECT. 1. Of the Foreign Trees and Shrubs introduced into Britain by the Romans, and during the Middle Ages, till the end of the 15th Century, 32.

Trees and Shrubs introduced by the Romans 32.; by the Occupiers of Monasteries and other religious Houses, and by the Crusaders, 33. Introduction of the cultivated Rose, 33. York and Lancaster Rose, 34. Foreign Trees and Shrubs of Scotland and Ireland, 34.

SUBJECT. 2. Of the Foreign Trees and Shrubs introduced into Britain in the 16th Century, 35.

Trees and Shrubs introduced in the time of Henry VIII., 35. Fitzherbert, Turner, Goodge, L'Obel, Grindal, Hampden, Gerard, &c., 35. Trees and Shrubs in the Earl of Essex's Garden at Barn Elms, 36. Corbett's Nursery at Twickenham, 36. Raleigh's Park in Dorsetshire, 36. Enumeration of the Species of Trees and Shrubs introduced into England during the 16th Century, by Hugh Morgan, Gray, L'Obel, Grindal, Gerard, &c., 36. 39.

SUBJECT. 3. Of the Foreign Trees and Shrubs introduced into Britain in the 17th Century, 40.

Tradescant's Garden at Lambeth, Bishop Compton's Garden at Fulham, 41. Ray's *Historia Plantarum*, 41. Dr. Mitchel, Sir Wm. Watson, Mr. Bentick, Dr. Plukenet, Sir Hans Sloane, Furber of Kensington, Gray of Fulham, &c., 41. Enumeration of Species of Foreign Trees and Shrubs found in the Episcopal Garden at Fulham in 1751, 42.; in 1793, and again in 1809, by Lyson, 43.; in 1835, 44. Banister, Evelyn, Hermann, Gibson, Sir Stephen Fox, London and Wise, Cooke, Lukar, London and Field, Dr. Uvedale, Miller, &c., 42. 46. Enumeration of the Trees and Shrubs introduced into England during the 17th Century, according to the *Hortus Kewensis*, 49. Harefield Park, 52. Edinburgh Botanic Garden, Oxford Botanic Garden, 53.

SUBJECT. 4. Of the Foreign Trees and Shrubs introduced into Britain during the 18th Century, 54.

Trees and Shrubs introduced at Whitton, Goodwood, Syon, &c., 54. Miller, Bradley, Switzer, Linnæus, Peter Collinson, the London Nurserymen, &c., 54. Ridgway House Garden, 54. London Gardens in 1712, 55. Lord Petre's Collection, 55.

John Clark, a Butcher at Barnes, famous for raising Cedars from Seed, &c., 55. The Great Cedar at Hendon Place, the Cedars at Whitton, 55. Fine Gardens noticed by Collinson on a blank Leaf of his Copy of Miller's Dictionary, 56. Enumeration of Trees and Shrubs, with their Dimensions, found in the Garden at Mill Hill (which formerly belonged to Collinson) in January, 1835, 56. Peterborough House, Whitton, 57. Twickenham Botanic Garden, Thordon Hall, Essex, 58. Cedar House, Cashio-bury, 59. Catalogue of Trees and Shrubs propagated for Sale in the London Nurseries in 1730, 60. Celebrated Amateurs and Gardeners of that Time: Dr. Compton, S. Reynardson, Esq., Dr. Uvedale, Duchess of Beaufort, Earl of Pembroke, 61. Dubois, 62. List of Species and Varieties of Trees and Shrubs given in the Catalogue of the Society of Gardeners, arranged according to the Natural System, 64. Catesby's Travels and Publications, 68. Plan for importing Acorns and other Seeds of American Trees, 70. Dr. Garden of Charlestown, 70. Planting of Stowe, Blenheim, Corby Castle, Pain's Hall, &c., 70, 71. Upton House, and its fine Specimens of Foreign Trees and Shrubs, 71. Trees and Shrubs at Purser's Cross in 1756, their comparative Dimensions taken at different periods between 1793 and 1835, 72. Trees and Shrubs at Syon, at Croome, and at various other Places, 73. Collection in the Chelsea Botanic Garden, 74. Botanic Garden and Arboretum at Kew, Sherard's Botanic Garden at Eltham, Twickenham Botanic Garden, 75. Brompton Park Nursery, 76. Kensington Nursery, Hoxton Nursery, Mile End Nursery, 77. Putney Nursery, Hammersmith Nursery, 78. Hackney Botanic Garden and Nursery, and those of Brentford, Lewisham, New Cross, &c., 79. Botanical and Horticultural Authors and Artists of the 18th Century, 79. Enumeration of the Trees and Shrubs introduced during each Decade of the 18th Century, 80-84. Biographical Notices of John and William Bartram, 85. Trees and Shrubs introduced into Scotland during the 18th Century, 86. Dr. Walker's Exertions, 87. Mr. Sang's *Planter's Calendar*, 89. Lists of the Species of Foreign Trees and Shrubs introduced into Scotland during the 17th and 18th Centuries according to Dr. Walker, 90, 91. Taymouth, Inverary Castle, 91. Prestonfield, 92. Hamilton Palace, 92. Panmure, New Posso, 93. Holyrood House, 94. Bargally, the Property of Andrew Heron, one of the greatest Botanists and Horticulturists that has ever appeared in Scotland, 95, 99. Dunkeld, 99. New Hailes, Arbigland. Loudon Castle, Dalmahoy, 101. Hopetoun House, Carmichael, Tynningham, 102. Scottish Nurseries, 104. Indigenous Trees of Ireland, 105. Irish Yew in a Garden at Mayland near Antrim, 106. Antrim Castle, 106. Mitchelstown, 107. Moira, and other Places celebrated for Foreign Trees; Lords Oriel and Clanbrasil introduced by far the greater number of Trees into Ireland in the 18th Century, 108. Dimensions of many fine Specimens of Trees and Shrubs at Oriel Temple, 109.; at Antrim Castle, 109.; at Tollymore Park, at Dundalk, 110.; at Cypress Grove, at Moira, and at Cranmore, 111.; at Castle Ward, 112.; at Howth Castle, Charleville Forest, and Shelton Abbey, 113.; at Castle Freke, Florence Court, Killruderly House, Mount Anville Hill, Castletown, 114. The finest Cedars in Ireland, 114. The largest Oak in Ireland, 115. Foreign Trees and Shrubs at Hillsborough, 115. Irish Nurseries, 115. Kilkenny Nursery, &c., 116. Glasnevin and Trinity College Botanic Gardens, 116, 117.

## SUBJECT. 5. Of the Foreign Trees and Shrubs introduced into Britain during the 19th Century, 117.

The number of Trees and Shrubs introduced in the three first Decades, 117. Biographical Notice of John Fraser, the Botanical Collector, 119.; of John Lyon, 122.; of David Douglas, 123. List of the Species and Varieties of Trees and Shrubs introduced into Europe by Douglas, 125. Number of Species of Foreign Trees and Shrubs introduced in Britain during every 10 Years, between 1548 and 1830; Number of Species furnished to Britain by each particular Foreign Country, 126. Planters of British Arboretums and Fruticetums since the Commencement of the 19th Century, 129. Public Bodies that have planted Arboretums, 129. British Nurserymen who have formed Arboretums, 130.

## CHAP. III.

### Of the History and Geography of the Trees and Shrubs of the Continent of Europe, 132.

#### SECT. I. Of the Indigenous and Foreign Trees and Shrubs of France, 132.

Enumeration of the Species of Trees and Shrubs indigenous to France, according to the *Botanicon Gallicum*, 132. Comparison between the Ligneous Flora of France, and that of Britain, 134. Classification of the Indigenous and Foreign Trees of France by Professor Thouin, 135. Comparison between the Number of Ligneous Plants in the Jardin des Plantes at Paris, and the London Horticultural Society's Garden, in 1834, 135. Robin, Duhamel, Jansen, Lemonnier, &c., 137. Remains of Collections of Foreign Trees and Shrubs in France, existing in 1834, 138. Existing Collectors of Foreign Trees and Shrubs in France, 139. Notice of Duhamel du Monceau, 140.; of André Michaux, 140.; of F. A. Michaux, 142.; of Dumont de Courset, and of the Gardens at Courset, 142.

#### SECT. II. Of the Indigenous and Foreign Trees and Shrubs of Holland and the Netherlands, 143.

Botanic Garden at Antwerp, 144. Country Seats near Rotterdam, 144. Garden at Läckén, with Dimensions of some of the Exotic Trees there, 145. Brussels, Ghent, and other Botanic Gardens, 145.

#### SECT. III. Of the Indigenous and Foreign Trees and Shrubs of Germany, including Hungary, 145.

Enumeration of the Ligneous Plants indigenous to Germany and Hungary, 146. Historical Notices of the Places most celebrated for their Collection of Exotic Trees and Shrubs, 147. Heidelberg, Baden, Durlach, Schwöbber, Harbke, Wörlitz, Schönbrunn, 145. Botanic Garden of the University of Vienna, Kopenzel, Brück on the Leytha, Hadersdorf, Eisenstadt, 150. Enumeration of the Species of Evergreen Trees and Shrubs, foreign and indigenous, which stand the Winter at Vienna without Protection, 150. Remarkable Specimens of Trees and Shrubs in the Botanic Garden at Berlin, 151. Foreign Trees and

Shrubs in Bavaria, in Saxony, in Hanover, 151.; in Wirtemberg, in Baden, in Hesse Cassel, in Nassau, 152.; in Mecklenburg, Anhalt, Frankfort, &c., 153. Principal German Nurseries, 153.

SECT. IV. Of the Indigenous and Foreign Trees and Shrubs of Scandinavia, including Denmark, Holstein, Sweden, Lapland, Finland, Iceland, Greenland, and the Faroe Islands, 153.

Enumeration of the Species of Ligneous Plants indigenous in the Scandinavian Peninsula, 153.; in the Faroe Islands, 154. Arboricultural Flora of Sweden, of Denmark, 154. Swedish Noblemen most conspicuous for introducing Foreign Trees and Shrubs, 155.

SECT. V. Of the Indigenous and Foreign Trees and Shrubs of the Russian Empire, 155.

Enumeration of the Ligneous Species indigenous to Russia, from Pallas's *Flora Rossica*, 156. Trees and Shrubs foreign and indigenous, which stand the Winter in the Petersburg Gardens, 157. Trees and Shrubs, foreign and indigenous, which endure the Winter in Moscow, 158. Trees and Shrubs which grow in the open Air in the Crimea, 159.

SECT. VI. Of the Indigenous and Foreign Trees and Shrubs of Switzerland, 161.

Enumeration of the Indigenous Species from Gaudin's *Flora Helvetica*, 160. Exotic Trees cultivated in Switzerland, Swiss Nurseries, 161. Places celebrated for Collections of Trees, 162. Bourdigny, 163. Botanic Gardens of Geneva, 164.

SECT. VII. Of the Indigenous and Foreign Trees and Shrubs of Italy, Greece, Spain, Portugal, and the Mediterranean Islands, 164.

Enumeration of Species from various Authors, 164-168.

SUBSECT. 1. Of the Trees and Shrubs of Italy, 168.

First Introduction, 168.; into Lombardy, 168. Remarkable Specimens in different Italian Gardens, Park and Gardens of Monza, &c., Isola Bella, 169.

SUBSECT. 2. Of the Trees and Shrubs of Spain and Portugal, 170.

La Gasca, Capt. S. C. Cook, 170. Discovery by Capt. Cook and Mr. Drummond that the *Alerce* is the *Thûja articulata*, 171.

SUBSECT. 3. Of the Trees and Shrubs of Turkey and Modern Greece, 171.

CHAP. IV.

Of the Trees and Shrubs of Asia, Africa, America, and Australia, which are suitable for temperate Climates, 172.

SECT. I. Of the Trees and Shrubs suitable for Temperate Climates, indigenous or introduced, in Asia, 172.

Enumeration of the Species inhabiting Regions temperate from their Elevation, and which, it is believed, would for the greater part endure the open air in the Climate of London, from Royle's *Illustrations* and other Sources, 173. Enumeration of the Species composing the Ligneous Flora of China, and which, it is believed, would for the greater part endure the Climate of London, 176.

SECT. II. Of the Indigenous and Foreign Trees and Shrubs of Africa, 177.

SECT. III. Of the Indigenous and Foreign Trees and Shrubs of America, 178.

SUBSECT. 1. Of the Indigenous and Foreign Trees and Shrubs of North America, 178.

Enumeration of the Indigenous Species, the greater part of which have been already introduced into Britain, 178. European Trees and Shrubs introduced into America, 181. General Aspect of the Ligneous Vegetation of America, 182.; about New York, Lake Champlain, St. Lawrence, Montreal, Lake Ontario, Toronto, Niagara, Hamilton, New London, Goderich, 183.; St. Clair, Lake Huron, Lake Erie, Pittsburg, Alleghany Mountains, 184.; Mexico, 185.

SUBSECT. 2. Of the Indigenous and Foreign Trees and Shrubs of South America, 185.

SECT. IV. Of the Indigenous and Foreign Trees and Shrubs of Australia and Polynesia.

Trees and Shrubs of New Zealand, 185.; of Van Diemen's Land; of New Holland, &c., 186.

CHAP. V.

Of the Literature of the Trees and Shrubs of Temperate Climates, 187.

Aristotle, Theophrastus, Vitruvius, Crescentius, Belon, Meursius, Johnston, Aldrovandus, Evelyn, 187. Hanbury, Miller, Earl of Haddington, Mead, Morel, Boutcher, Dr. Anderson, Marshal, Nichol, Sang, Pontey, Lambert, Dr. Wade, Philips, Watson, Cobbett, George Don, 188. In France; Duhamel, Loiseleur Deslongchamps, Desfontaines, Jaume St. Hilaire, Thouin, André Michaux, F. A. Michaux, Dumont de Courset, 189. In Holland; Krause, 189. In Germany; Du Roi, Schmidt, C. L. Willdenow. F. J. Hayne, F. Otto, 190. In America, D. J. Brown, 190.

CHAP. VI.

Conclusion, 190.

Free and universal Exchange and Intercourse, 191. Equalisation of the Plants of different Regions of the Temperate Zone; Establishment of Botanic Gardens and Arboretums all over the World, 192. Cooperative System applied to the collecting, distributing, and cultivating of Trees and Shrubs, 192.

## PART II.

## OF THE SCIENCE OF THE STUDY OF TREES.

## CHAP. I.

Of the Study of Trees pictorially, or as component Parts of General Scenery, 193.

SECT. I. Of the Study of the Forms of Trees and Shrubs, 193.

Height and Breadth, Form and Outline, 194. Light and Shade, Colours, Trunks of Trees, 195. Branches, 196. Mode of Growth, Mode of Tufting, Leaves, Spray, Buds, 197.

SECT. II. Of the Expression and Character of Trees and Shrubs considered pictorially, 198.

Character, Regularity, 198. Symmetry, Organic Beauty, Moral and Historical Expression, 199. Picturesque Beauty, Gardenesque Beauty, Architectural and Sculpturesque Trees, Viewing Trees with Reference to their Beauty as Organic Forms, 200. Trees with Local Associations, 201.

SECT. III. Of the Mode of drawing Trees from Nature, in such a Manner as to give the general Pictorial Expression of the Species of Tree delineated, 202.

Choice of Specimens, 202. ; Details of the Process, 203. Drawing to a Scale, 204. Drawing the Leaves in order to exhibit the "Touch," 207. Botanical Specimens, 209.

## CHAP. II.

Trees and Shrubs considered botanically, 211.

SECT. I. Of the Classification of Trees and Shrubs, 211.

Alphabetical Arrangement, 211. Linnæan Arrangement; Jussieuan, or Natural, Arrangement, 212.

SECT. II. Of the Distinction between Species and Varieties in Trees and Shrubs, 212.

Definition of a Species; Cultivated Varieties, Accidental Varieties, 213. Botanical Species, 214. Species according to De Candolle, 215. ; Races according to the same Author, 215. Varieties, Variations, Mules and Hybrids, Botanical Species according to De Candolle 216.

SECT. III. Of the Mode of describing Trees and Shrubs, 217.

Unavoidable Evils of describing Plants from dried Specimens, 218.

## CHAP. III.

Trees and Shrubs considered with Reference to their Uses in the Economy of Nature, and to Man, 219.

SECT. I. Trees and Shrubs considered with Reference to uncultivated Nature, 220.

Influence of a Predominance of Forest on the indigenous Animals; on the herbaceous Plants; on the Waters, Rivers, and Lakes; in increasing the Moisture of the Atmosphere; in moderating the Heat of Summer, and the Cold of Winter, 220. Forests of Britain, of France, of Germany, of Italy. 220.; of Holland, Belgium, &c., 221.

SECT. II. Trees and Shrubs considered with Reference to Man, 221.

Uses of Timber in Arts and Manufactures, 221. Of the Fruit, Flowers, and other Products of Trees in Domestic Economy, 222.

## CHAP. IV.

Summary of Particulars to be taken into Consideration, in preparing the Description, and Natural and Economical History, of Trees and Shrubs, 222.

Classification: Genera, Distinctive Character, Identifications, Synonymes, Derivations, 222. Engravings: Engravings of Trees, Pictorial Signs, Descriptions, Descriptive Details, 223. General Descriptions, 224. Casualties: Insects and Vermin, Parasitical Plants, Diseases, Accidents, 225. Geographical Distribution, 226. History: Retrospective History, Prospective History, 226. Use: Arts of Construction, 226.; Manufacture of Machinery, &c., the Arts of Fabrication, Chemical Arts, Arts of Domestic Economy, the Arts of Rural Economy, Medicine, the Use of Trees by the Priests of particular Religions; Poetical, Mythological, and Legendary Associations; the Picturesque and Decorative Uses of Trees, 227. Propagation: Natural Propagation, Artificial Propagation, 227. Culture: the Soil, Situation, and Exposure, Culture in the Nursery, 228.; Choice of Plants, and planting out; Culture after final removal; Species adapted for Succession, 229. Statistics: Geographical Statistics, 229.; Commercial Statistics, 230.

## PART III.

THE DESCRIPTION, GEOGRAPHY, HISTORY, PROPERTIES AND USES, SOIL AND SITUATION, PROPAGATION AND CULTURE, ACCIDENTS, DISEASES, INSECTS, AND STATISTICS, OF THE HARDY TREES AND SHRUBS OF BRITAIN, INDIGENOUS AND FOREIGN ; WITH NOTICES OF THE HALF-HARDY SPECIES.

The Synonymes are printed in Italics. The letters *pl.* refer to the portraits of entire trees ; and the letters *fig.* and *f.* to the botanical figures incorporated in the text.

|                                                                                                              | Page                 |                                                                                                            | Page                    |

## X. ONONIS L. 604

THE RESTHARROW.

*Anonis* and *Natrix* Moench.  
*Arrête-bœuf*, Bugrane, Fr.  
*Hancchel*, Ger.

1. fruticosa L. Europe fig. 298. 604  
The shrubby Restharrow.  
Variety - - - 605  
2 microphylla Dec. O. fruticosa Asso.
2. rotundifolia L. Alps fig. 299. 605  
The round-leaved Restharrow.  
O. latifolia Asso.  
Natrix rotundifolia Moench.  
Variety - - - 605  
2 aristata Dec.
3. (r.) tribracteata Dec. Carinthia 605  
The three-bracted-calyxed Restharrow.  
O. rotundifolia L.
4. Natrix Dec. Europe fig. 300. 605  
The Goat-root Restharrow.  
Natrix pinguis Moench.
5. arenaria Dec. France - 606  
The Sand Restharrow.  
Asotus spinia adrens latea minor Magn. Bot.
6. cenisia L. France - 606  
The Mount Cenis Restharrow.  
O. cristata Mill. Dict.  
Variety - - - 606  
2 subaristata Dec. O. cenisia Asso.
7. aragonensis Asso. Spain - 606  
The Aragon Restharrow.  
E. dumosa Lapeyr.
- App. i. Other suffruticose Species of Ononis.  
- - - 606

- O. pedunculata Lindl. fig. 301.  
O. crispa L.  
O. hispanica  
O. vaginatis L.  
O. arachnoidea Lapeyr.  
O. longifolia Willd.  
O. falcata Willd.  
O. ramosissima Desf.  
O. tridentata L.  
O. angustifolia Lam.  
O. frutida Schousb.

# XI. AMORPHA L. 606 THE AMORPHA, or Bastard Indigo. Bonafidia Neck.

1. fruticosa L. N. America f. 302. 607  
The shrubby Amorpha.  
Wild Indigo.  
Faux Indigo, Fr.  
Strauchartiger Uniform, Ger.  
Varieties - - - 607  
2 angustifolia Pursh.  
3 emarginata Pursh.  
4 Lewisii Lodd. Cat.  
5 cærulea Lodd. Cat.
2. (f.) glabra Desf. N. America 607  
The glabrous Amorpha.
3. (f.) nana Nutt. N. America 607  
The dwarf Amorpha.  
A. microphylla Pursh.
4. (f.) fragrans Swt. North America fig. 303. 608  
The fragrant Amorpha.  
A. nana Sims.

5. (f.) crœceo-lanata Wats. North America - fig. 304. 608  
The Saffron-coloured woolly Amorpha.
6. (f.) canescens Nutt. N. Am. 608  
The canescent Amorpha.  
? A. pubescens Pursh.

# XII. ROBINIA L. 609 THE ROBINIA, or Locust Tree. Pseudacacia. Robinier, Fr. Robinie, Ger.

1. Pseud-Acacia Lin. North America pl. 81, 82. fig. 305. 609.  
The common Robinia, or False Acacia  
Æschynomene Pseudacacia Roxb.  
Pseudacacia odorata Moench.  
Locust Tree, Amer.  
The Bastard Acacia.  
Acacia blanc, Carouge des Américains, Fr.  
Gemeine Acacia, Schotendorn, Ger.  
Varieties - - - 609  
2 flore luteo Dumont.  
3 inermis Dec.  
4 crispa Dec.  
5 umbraculifera Dec. pl. 83.  
R. inermis Dum.  
6 tortuosa Dec. pl. 84.  
7 sophoræfolia Lodd. Cat.  
8 amorphæfolia Lk.  
9 stricta Lk.  
10 procera Lodd. Cat.  
11 pendula Ort.  
12 monstrosa Lodd. Cat.  
13 macrophylla Lodd. Cat.  
14 microphylla Lodd. Cat.  
R. angustifolia Hort.  
15 spectabilis Dum.  
16 latisiliqua Prince's Cat.

2. [P.] viscosa Vent. North America pl. 85. fig. 336. 626  
The clammy-barked Robinia.  
R. glutinosa Curt.  
R. montana Bartram.  
The Rose-flowering Locust.

3. dubia Fouc. Hybrid. - 627  
The doubtful Robinia.  
R. hybrida Audib.  
R. ambigua Poir.  
? R. echinata Mill. Dict.  
R. intermedia Soulange-Bodin.

4. hispida L. N. Amer. f. 307. 627  
The hispid Robinia, or Rose Acacia.  
R. rosea N. Du Ham.  
R. montana Bartr. Voy.  
Æschynomene hispida Roxb.  
Varieties - - - 628  
2 nana Dec.  
3 rosea Pursh.  
4 macrophylla Dec. pl. 86.  
R. grandiflora Hort.

# XIII. CARAGANA Lam. 629 THE CARAGANA, or Siberian Pea Tree. Robinia sp. L.

[illegible]

2. communis L. † Mauritania pl. 103. 674  
The common Almond Tree.

Varieties. 𐌸

- 1 amara Dec. † - - 674  
The bitter-kerneled common Almond Tree.

Amandier amer, Fr.  
Gemeine Mandelbaum, Ger.

- 2 dulcis Dec. † - - 675  
The sweet-kerneled common Almond Tree.

Amandier à petits Fruits, Amande douce, Fr.  
Süsse Mandel, Ger.

- 3 flore pleno Baum. Cat. † - 675

- 4 foliis variegatis Baum. Cat. † 675

- 5 fragilis Ser. † - 675

The brittle-shelled common Almond Tree.

A. fragilis Hell.  
Amandier des Dames, N. Du Ham.  
Coque molle, Fr.  
Abellan, Provence.

- 6 macrocarpa Ser. † - 675

The long-fruited common Almond Tree.

Amandier à gros Fruits, N. Du Ham.  
Amandier Sultane, Amandier des Dames,  
Amandier Pistache, Fr.

- 7 persicoides Ser. † - 675

The Peach-like-leaved common Almond Tree.  
Other Varieties - 675

3. orientalis Ait. 𐌸 Levant - - 679  
The Eastern Almond Tree.

A. argentea Lam.

- App. i. Other Species of Amygdalus. † 𐌸 679

A. Tournefortii Bosc. 𐌸

A. cochinchinensis Lour. †

A. microphylla H. B. et Kunth. 𐌸

- II. PE'RSICA Tourn. † 𐌸 671. 679

THE PEACH TREE.

Amygdalus sp. L.  
Trichocarpus Neck.  
Pêcher, Fr.  
Pfirschenbaum, Ger.

1. vulgaris Mill. † Persia pl. 104. 680  
The common Peach Tree.

Amygdalus Persica L.  
Pêche duveteuse, Fr.  
Pfirsche, Ger.

Varieties. † 𐌸

- 1 The freestone common Peach Tree. †

Pêche, Fr.

- 2 The clingstone common Peach Tree. †

Pavie, Fr.

- 3 flore pleno Hort. †

The double-flowering common Peach.

- 4 alba Lindl. 𐌸

The white-flowering common Peach.

- 5 foliis variegatis Hort. †

The variegated-leaved Peach Tree.

- 6 compréssa Hort. 𐌸 f. 397.

The flat Peach of China.

2. (v.) lævis Dec. † Persia - 680  
The smooth-skinned Peach, or Nectarine Tree.

Amygdalus Persica Lam.  
Amygdalus Persica Nectarina Ait.  
Brugnon, Pêche lisse, Fr.

Varieties † - - 680

- 1 The freestone Nectarine. †  
Pêche lisse, Fr.

- 2 The clingstone Nectarine. † Page  
Brugnon, Fr.

- III. ARMENTACA Tourn. † 671. 681  
THE APRICOT.

Prunus sp. L. and others.  
Abricotier, Fr.  
Aprikosenbaum, Ger.

1. vulgaris Lam. † Asia pl. 105. 682  
The common Apricot Tree.

Prunus Armeniaca L.

Varieties † - - 682

- 1 ovalifolia Ser. † fig. 398.

The oval-leaved common Apricot Tree.

- 2 cordifolia Ser. † fig. 399.

The heart-shaped-leaved common Apricot Tree.

- 3 foliis variegatis Hort. †

The variegated-leaved common Apricot Tree.

- 4 flore pleno Hort. †

The double-blossomed common Apricot Tree.

2. dasycarpa Pers. † f. 400, 401. 683  
The thick-fruited Apricot Tree.

A. atropurpurea Lois.  
Prunus dasycarpa Ehrh.  
Prunus Armeniaca niger Desf.  
The black Apricot.

Variety † - - 683

- 2 persicifolia Lois. † f. 402

The Peach-leaved thick-fruited Apricot Tree.

3. (v.) sibirica Pers. † Siberia pl. 106. 683  
The Siberian Apricot Tree.

Prunus sibirica L.

4. (v.) brigantiaca Pers. † Fr. f. 403. 684  
The Briançon Apricot Tree.

Prunus brigantiaca Vill.

- IV. PRU'NUS Tourn. † 𐌸 671. 684

THE PLUM.

Prunophora Neck.

1. spinosa L. † Europe pl. 107. 684  
The spiny Plum Tree, or common Sloe Thorn.

P. sylvestris Fuch.  
Blackthorn.  
Prunier épineux, Prunellier, E'pine noire,  
Mère-du-Bois, Fr.  
Schleadorn, Schlen Pflaum, Ger.

Varieties † - - 685

- 1 vulgaris Ser. †

The common Sloe Thorn.

P. spinosa Lois.

- 2 foliis variegatis Ser. †

The variegated-leaved Sloe Thorn.

- 3 microcarpa Wallr. †

The small-fruited Sloe Thorn.

- 4 macrocarpa Wallr. †

The large-fruited Sloe Thorn.

- 5 ovata Ser. †

The ovate-leaved Sloe Thorn.

- 6 flore pleno †

The double-flowered Sloe Thorn.

26. (v.) canadensis Lois. ♀ Canada - 713  
The Canadian Bird Cherry Tree.  
*Prunus canadensis* Willd.

27. nepalensis Ser. ♀ Nepal - 713  
The Nepal Bird Cherry Tree.

Species of Bird Cherry Trees which have not yet been introduced. ♀ - 714

- C. paniculata* Lois. ♀  
*Prunus paniculata* Thunb.  
*C. acuminata* Wall. ♀  
*C. mollis* Dougl. ♀  
*C. emarginata* Dougl. ♂  
*C. capricida* G. Don. ♀  
The Goat-killing Bird Cherry Tree.  
*Prunus capricida* Wall.  
*Prunus undulata* Hamilt.  
*C. undulata* Dec.

- C. elliptica* Lois. ♀  
*Prunus elliptica* Thunb.

§ iii. *Laurocérasi*. ♂ - 714

28. lusitânica Lois. ♂ Portugal  
pl. 117, 118. fig. 421. 714  
The Portugal Laurel Cherry, or common Portugal Laurel.  
*Prunus lusitânica* L.  
The Cherry Bay.  
Azareiro, Portuguese.

Variety ♂ - 714

- 2 Híxa Ser. ♂ - 714  
*Prunus Híxa* Broussonet.  
*Prunus multiglandulosa* Cav.

29. *Laurocérasmus* Lois. ♂ Asia Minor  
fig. 422. 716  
The Laurel Cherry, or common Laurel.  
*Prunus Laurocérasmus* L.  
Cherry Bay, Cherry Laurel.  
Laurier au Lait, Laurier Amandier, Fr.  
Kirsche Lorbeer, Ger.

Varieties - 716

- 2 variegata Hort. ♂  
3 angustifolia Hort. ♂  
*Hartögia capensis* Hort.

30. caroliniàna Michx. ♂ Carolina  
fig. 423. 720  
The Carolina Bird Cherry Tree.  
*Prunus caroliniàna* Ait.  
*Prunus sempervirens* Willd.  
*Párus caroliniàna* Mill. Dict.  
Wild Orange, Amer.

App. i. Other Species of *Cérasmus*. - 721

- C. sphaerocarpa* Lois.  
*Prunus sphaerocarpa* Swartz.  
*C. occidentalis* Lois.  
*Prunus occidentalis* Swartz.

Sect. II. *SPIRÆÆ* Dec. 672. 721

- VI. *PURSHIA* Dec. ♂ - 672. 721  
THE PURSHIA.  
*Tigarea Pursh*, not of Aublet.

1. tridentata Dec. ♂ North America  
fig. 424, 425. 721  
The three-toothed-leaved Purshia.  
*Tigarea tridentata* Pursh.

- VII. *KE'RRIA* Dec. ♂ - 672. 722  
THE KERRIA.

*Rubus* L.  
*Córchorus* Thunb.  
*Spiræ'a* Camb.

1. japónica Dec. ♂ Japan fig. 426. 722  
The Japan Kerria.  
*Rubus japonicus* L.  
*Córchorus japonicus* Thunb.  
*Spiræ'a japonica* Camb.

- VIII. *SPIRÆ'A* L. ♂ - 672. 722

THE SPIRÆA.  
*Spirée*, Fr.  
*Spierstaude*, Ger.

§ i. *Physocárpos* Camb. ♂ - 723

1. opulifolia L. ♂ North America  
fig. 427, 428. 723  
The Guelder-Rose-leaved Spiræa, or Virginian Guelder Rose.  
Nine Bark, Amer.  
Variety ♂ - 723  
2 tomentella Ser. ♂

2. capitata Ph. ♂ North America - 723  
The capitate-corymbed Spiræa.  
*S. opulifolia* var. Hook.  
3. monógyna Torrey. ♂ N. America 723  
The monogynous Spiræa.

§ ii. *Chamædryon* Ser. ♂ - 724

4. chamædrifolia L. ♂ Siberia f. 429. 724  
The Germander-leaved Spiræa.  
*S. cantoniensis* Lour.  
Varieties ♂ - 724  
1 vulgaris Camb. ♂  
2 média Pursh. ♂  
3 oblongifolia Camb. ♂  
*S. oblongifolia* Waldst.

XV. COTONEASTER Med. 673. 869

THE COTONEASTER.  
*Mespilus* sp. L.

§ i. Leaves deciduous. Shrubs. - 870

1. *vulgaris* Lindl. Europe f. 620. 870  
 The common Cotoneaster.  
*Mespilus Cotoneaster* L.  
*Néflier cotonneux*, Fr.  
*Quitten Mispel*, Ger.  
 Varieties - - 870  
 1 *erythrocarpa* Led.  
 2 *melanocarpa* Led.  
 3 *depressa* Fries.

2. (v.) *tomentosa* Lindl. Switzer. 870  
 The tomentose, or woolly, Cotoneaster.  
*Mespilus tomentosa* Willd., not of Lam.  
*Mespilus eriocarpa* Dec.

3. (v.) *laxiflora* Jacq. . . . .  
 fig. 621, 622. 870  
 The loose-flowered Cotoneaster.

§ ii. Subevergreen or deciduous. Tall Shrubs, or low Trees. 871

4. *frigida* Wall. Nepal pl. 156. 871  
 The frigid Cotoneaster.  
*Pyrus Nussia* Ham.

5. (f.) *affinis* Lindl. Nepal pl. 157. 871  
 The related (to *C. frigida*) Cotoneaster.  
*Mespilus integerrima* Ham. MSS.

6. *acuminata* Lindl. Nepal pl. 158. 872  
 The acuminate-leaved Cotoneaster.  
*Mespilus acuminata* Lodd.

7. *nummularia* Lindl. Nepal pl. 159. 872  
 The money-like-leaved Cotoneaster.

§ iii. Leaves evergreen, leathery. Low Shrubs, with prostrate Branches; Trailers, but not properly Creepers. - - 872

8. *rotundifolia* Wall. Nepal fig. 623, 624. 872  
 The round-leaved Cotoneaster.  
*C. microphylla* β *Uva-ursi* Lindl.  
 The Bear-berry-leaved Nepal Cotoneaster.

9. (r.) *microphylla* Wall. Nepal fig. 625. 873  
 The small-leaved Cotoneaster.

10. (r.) *buxifolia* Wall. Nepal 873  
 The Box-leaved Cotoneaster.

App. i. Species of *Cotoneaster* not yet introduced. - - 873

*C. bacillaris* Wall  
*C. obtusa* Wall.

XVI. AMELANCHIER Med. 673. 874

THE AMELANCHIER.

*P. nepalensis* Lodd.  
? *P. triflorus* Royle.

## II. DECUMARIA L. 🌿 950. 955

THE DECUMARIA.

*Forsythia* Walt., not of Vahl.

1. *barbara* L. 🌿 Carolina f. 679, 680. 955  
The barbarous Decumaria.  
*D. radicans* Moench.  
*D. Forsythia* Michx.  
*D. prostrata* Lodd.
- Variety 🌿 - - - 955
- 2 *sarmentosa* Dec. 🌿  
*D. sarmentosa* Bosc.  
*Forsythia scandens* Walt.

## App. I. Half-hardy ligneous Plants of the Order Philadelphaceæ. - 956

- Deutzia scabra* Thunb. 🌿 f. 681. 950.
- D. corymbosa* R. Br.  
*Philadelphus corymbosus* Wall.  
*D. staminea* R. Br.  
*Philadelphus stamineus* Wall.  
*D. Brunonia* Wall.  
*Leptospermum scabrum* Wall.

## Myrtaceæ. 🌿 956

## Sect. I. MELALEUCÆ. 🌿 956

- Tristania nerifolia* R. Br. 🌿 fig. 682. 956  
*Melaleuca nerifolia* Sims.  
*Melaleuca salicifolia* Bot. Rep.  
*Beaufortia decussata* R. Br. 🌿 fig. 633. 957  
*Calothamnus villosa* R. Br. 🌿 fig. 634. 957

- C. gracilis* R. Br. 🌿 - 957  
*C. quadrifida* R. Br. 🌿 - 957  
*C. clavata* Cunningham. 🌿 - 957  
*Melaleuca squamea* Labill. 🌿 - 957  
*M. linearifolia* Sm. 🌿 fig. 685. 957  
*Metrosideros hyssopifolia* Cav.  
*M. pulchella* R. Br. 🌿 - 957  
*M. hypericifolia* Sm. 🌿 fig. 687. 957  
*M. squarrosa* Sm. 🌿 - 957  
*Eudasmia tetragona* R. Br. 🌿 fig. 686. 958

## Sect. II. EULEPTOSPERMEÆ. 🌿 958

- Eucalyptus resinifera* Sm. 🌿 fig. 688, 689. 958  
The Iron Bark Tree.  
*E. robusta* Sm. 🌿 pl. 188. 959  
The Stringy Bark Tree.  
*E. viminalis* Labill. 🌿 fig. 692, 693. 959  
*E. amygdalina* Labill. 🌿 fig. 694, 695. 959  
*E. piperita* Sm. 🌿 fig. 696, 697. 959  
The Blue Gum Tree.  
*E. cordata* Labill. 🌿 fig. 698. 959  
*E. pulverulenta* Sims. 🌿 fig. 697. 959  
*E. cordata* Hort. Berol.  
*E. diversifolia* Bonpl. 🌿 - 959  
*E. connata* Dum.  
*E. piperita* Hort. Berol.  
*E. heterophylla* Swt.  
*E. angustifolia* Hort.  
Several other Species of *Eucalyptus* - - - 959  
*Angophora cordifolia* Cav. 🌿 fig. 699. 960  
*Metrosideros hispidus* Sm.  
*A. lanceolata* Cav. 🌿 fig. 702. 960  
The Apple Tree of New Holland.  
*Metrosideros splendens* Gaertn.  
*Callistemon salignus* Dec. 🌿 - 960  
*Metrosideros salignus* Sm.  
*C. lanceolatus* Dec. 🌿 fig. 700. 960  
*Metrosideros lanceolatus* Sm.  
*Metrosideros citrina* Bot. Mag.  
*Metrosideros corifolius* Vent. 🌿 fig. 705. 961  
The Coris-leaved Iron Wood.  
*Leptospermum ambiguum* Sm.  
*Leptospermum grandifolium* Sm. 🌿 fig. 701. 961  
*L. lanigerum* Ait. 🌿 - 961  
*Philadelphus lanigerus* Ait.  
*Billötia marginata* R. Br. 🌿 - 961  
*Leptospermum marginatum* Labill.  
*B. flexuosa* D. Don. 🌿 - 961  
*Fabricia myrtifolia* Gaertn. 🌿 fig. 703. 961  
*F. stricta* Lodd. 🌿 - 961  
*Bæckia virgata* Andr. 🌿 fig. 704. 961  
*Leptospermum virgatum* Forsk.  
*Melaleuca virgata* L. fil.

## Sect. III. MYRTEÆ. 🌿 961

- Psidium Cattleianum* Sabine. 🌿 fig. 706. 961  
Cattle's Guava.  
*P. coriaceum* Marsh.  
*P. chinense* Lodd.

*Myrtus communis* L. 🌿 - 961  
The common Myrtle.

Varieties 🌿 - 963

§ i. *Melanocarpa* Dec. 🌿 - 963

- 1 *romana* Dec. 🌿  
The common broad-leaved, or Roman, Myrtle.
- 2 *tarentina* Mill. Jc. 🌿  
The Tarentum, or Box-leaved, Myrtle.
- 3 *italica* Mill. Dict. 🌿  
The Italian, or upright, Myrtle.
- 4 *bætica* Mill. Dict. 🌿  
The Andalusian, or Orange-leaved, Myrtle.
- 5 *lusitânica* L. 🌿  
The Portugal Myrtle.  
*M. acuta* Mill. Dict.  
Subvar. ? The Nutmeg Myrtle 🌿
- 6 *bélgica* Mill. Dict. 🌿  
The broad-leaved Dutch Myrtle.  
Subvar. The double-flowered Myrtle.
- 7 *mucronata* L. 🌿  
The Rosemary, or Thyme-leaved Myrtle.

§ ii. *Leucocarpa* Dec. 🌿 - 963

- 8 *leucocarpa* Dec. 🌿  
The white-berried Myrtle.

## § iii. Garden Varieties. 🌿 - 963

1. Gold-striped broad-leaved Myrtle 🌿

Page

2. Broad-leaved Jew's Myrtle.                964
3. Gold-striped Orange-leaved Myrtle               964
4. Silver-striped Italian Myrtle                964
5. Striped-leaved Myrtle                 964
6. Silver-striped Rosemary leaved Myrtle                    964
7. Silver-striped Nutmeg Myrtle               964
8. Cock's-comb, or Bird's-nest Myrtle               964
9. Spotted-leaved Myrtle                 964

*M. tomentosa* Ait.                      fig. 707. 964

*M. canescens* Lour.                      964

*M. tenuifolia* Sm.                      964

#### Sect. IV. CHAMÆLAUCIÆ. 964

*Chamælaucium ciliatum* Desf.                    964

*Calythrix glabra* R. Br.                     fig. 708. 964

*C. ericoides* Cunningh.                     964

*Darwinia fascicularis* Rudge.                    964

#### Passifloraceæ. 964

*Passiflora cærulea* L.                      fig. 709. 964

var. 2 *angustifolia* Hort.                    964

3 *glaucophylla* Hort.                     964

4 *Colvillii* Swt.                     964

5 *racemosa* Hort.                     964

*P. incarnata* L.                       fig. 710. 965

The flesh-coloured Granadilla, or May Apple.

*P. filicifolia* L.

I. HYDRA'NGEA L. ■ ■ — ■ — 994

THE HYDRANGÆA.

Hydrangea and Hortensia Juss.

1. arborescens L. ■ North America  
fig. 748. 994

The arborescent Hydrangea.

Varieties ■ — — 995

1 vulgaris Ser. ■

H. vulgaris Michx. and ? Pursh.

H. arborescens Curt.

H. frutescens Moench.

2 discolor Ser. ■

2. (a.) cordata Pursh. ■ North America  
fig. 749. 995

The cordate-leaved Hydrangea.

3. nivea Michx. ■ North America  
fig. 750. 995

The snowy-leaved Hydrangea.

H. radiata Walt., not of Sm.

Variety — — 995

2 glabella Ser.

4. quercifolia Bartram. ■ North America  
fig. 751. 995

The Oak-leaved Hydrangea.

H. radiata Sm., not of Walt.

5. heteromalla D. Don. ■ Nepal 996

The diverse-haired-leaved Hydrangea.

App. i. Half-hardy Species of Hydrangea. 996

H. Hortensia Sieb. ■ fig. 752.

The Chinese Guelder Rose.

H. hortensia Sm.

Hortensia opuloides Lam.

Hortensia speciosa Pers.

Primula matubilis Lour.

Viburnum serratum and Viburnum tomentosum Thunb.

H. vestita Wall. ■

H. altissima Wall. ■

Umbellaceæ. ■ ■ — ■ — 997

I. BUPLEURUM Tourn. ■ ■ — ■ — 997

THE BUPLEURUM, or Hare's Ear.

Tendria and Buprestis Spreng.

Seseli Bauh. and Mor.

Bupliore, Oreille de Lièvre, Fr.

Hasenöhrllein, Ger.

The small-flowered Honeysuckle.

*Caprifolium parviflorum* Pursh.

*L. dioica* L.

*L. media* Murr.

*Caprifolium bracteosum* Michx.

*Caprifolium dioicum* Rœm. et Schult.

*Caprifolium glaucum* Moench.

Glaucous Honeysuckle.

*Chèvrefeuille dioïque*, Fr.

*Meergrünes Geissblätt*, Ger.

*Middelboore Kamperfoelie*, Dutch.

8. (p.) *Douglàsii* Dec. 🍷 N. America 1048

Douglas's Honeysuckle.

*Caprifolium Douglàsii* Lindl.

9. *grata Ait.* 🍷 N. America f. 805. 1048

The pleasant, or evergreen, Honeysuckle.

*Caprifolium gratum* Pursh.

*L. virginiana* Marsh.

? *Periclymenum americanum* Mill.

*L. microphylla* Hook.

- 1049

- B. *Limb of Corolla nearly equal.* — *Periclymenum* Tourn. - 1049
10. *sempervirens* Ait. 2 North America fig. 806. 1049  
The evergreen Trumpet Honeysuckle.  
*Caprifolium sempervirens* Michx.  
*Periclymenum sempervirens* Mill.  
*Alaternus sempervirens* Kœhl.  
*Periclymenum virginicum* Riv.  
Varieties 2 - - 1049  
2 major Ait. 2  
The large Trumpet Honeysuckle.  
3 minor 2 —  
The small Trumpet Honeysuckle.  
? *L. connata* Meerb.
11. *ciliosa* Poir. 3 North America 1050  
The ciliated-leaved Honeysuckle.  
*Caprifolium ciliosum* Pursh.  
*L. ciliata* Dietr.
12. *occidentalis* Hook. 3 N. Amer. 1050  
The Western Honeysuckle.  
*Caprifolium occidentale* Lindl.  
*Caprifolium ciliosum* Dougl. MSS.  
*L. pilosa* Willd.  
*Caprifolium villosum* H. B. et Kunth. - 1050
- § ii. *Xylosteum* Dec. 2 2 2 2 1050  
*Xylosteum* Juss.  
*Lonicera* Rœm. et Schult.  
*Xylosteum* and *Chamaecerasus* Tourn.  
*Xylosteum* and *Isika* Adans.  
*Cobaea* Neck.  
The Fly Honeysuckle.  
*Hackenkirche*, Ger.  
*Hondsbezien*, *Hondskarsen*, Dutch.
- A. *Ovaries and Berries altogether distinct. Stems scandent. Flowers irregular.* — *Nintoda* Dec. 1050
13. *confusa* Dec. 3 Japan fig. 808. 1050  
The confused Honeysuckle.  
*Nintoda confusa* Scot.  
*Lonicera japonica* Andr., not of Thunb.  
*Nintoo*, *Sintoo*, Kæmpf.  
*Caprifolium japonicum* Loud. Hort. Brit.
14. *longiflora* Dec. 3 China - 1051  
The long-flowered Honeysuckle.  
*Caprifolium longiflorum* Sabine.  
*Nintoda longiflora* Swt.  
*Caprifolium japonicum* D. Don.  
*Caprifolium nepalense* G. Don.
15. *japonica* Thunb. 2 Japan fig. 809, 810. 1051  
The Japan Honeysuckle.  
*Nintoda japonica* Swt.  
*L. chinensis* Hort. Kew.  
*L. flexuosa* Lodd., not of Thunb.  
*L. glabrata* Roxb.  
*Caprifolium chinense* Loud. Hort. Brit.  
*Caprifolium flexuosum* Hort.
- a. *Hardy Species of Lonicera belonging to the Division Nintoda of the Section Xylosteum, not yet introduced.* - 1052  
*L. cochinchinensis* Don's Mill.  
*L. Xylosteum* Lour.  
*L. Telfairii* Hook. et Arn.  
*L. Periclymenum* Lour.  
*L. Lechenaaultii* Wall.  
*L. glabrata* Wall.  
*L. nigra* Thunb.  
*L. acuminata* Wall.  
*L. diversifolia* Wall.  
*L. Agüstrina* Wall.  
*Xylosteum ligustrinum* D. Don.  
*Xylosteum Naisdca* Hamilt.
- L. lanceolata* Wall.  
*L. canescens* Schousb.  
*L. biflora* Desf.  
*L. bracteata* Royle.  
Several other species of *Lonicera*.
- B. *Berries distinct, or usually connate together at the Base, and diverging at the Tip. Corolla hardly gibbous at the Base, or equal.* — *Chamaecerasi* Dec. - 1052
16. *tatarica* L. 2 Siberia f. 811, 812. 1052  
The Tartarian Honeysuckle.  
*Xylosteum cordatum* Mœnch.  
*Xylosteum tartaricum* Dum.  
Varieties 2 - - 1053  
2 albiflora Dec. 2  
*L. pyrenaica* Willd.  
3 rubriflora Dec. 2  
*L. grandiflorum* Lodd.  
*L. sibirica* Hort.  
4 lutea Lodd. 2  
5 latifolia Lodd. 2
17. (t.) *nigra* L. 2 Europe - 1053  
The black-fruited Honeysuckle.  
*Caprifolium roseum* Lam.  
*Chamaecerasus nigra* Delarb.  
Variety 2 - - 1053  
2 campaniflora 2 fig. 813, 814.  
*Xylosteum campaniflorum* Lodd.
18. (t.) *ciliata* Mühl. 2 N. Amer. 1053  
The ciliated-leaved Honeysuckle.  
*Xylosteum ciliatum* Pursh.  
*L. tatarica* Michx., not of L.  
*L. canadensis* Rœm. et Schult.
19. *pyrenaica* L. 2 Pyrenees - 1054  
The Pyrenean Honeysuckle.  
*Caprifolium pyrenaicum* Lam.  
*Xylosteum pyrenaicum* Tourn.
20. *punicea* Sims. 2 North America fig. 815. 1054  
The crimson-flowered Honeysuckle.  
*Symphoricarpos puniceus* Swt.
21. *Xylosteum* L. 2 North America fig. 816. 1054  
The bony-wooded, or upright, Fly Honeysuckle.  
*Caprifolium dumetorum* Lam.  
*Xylosteum dumetorum* Mœnch.  
Varieties 2 - - 1055  
2 leucocarpa Dec. 2  
3 xanthocarpa Dec. 2  
4 melanocarpa Dec. 2
22. *flexuosa* Thunb. 2 Japan - 1055  
The flexible-stemmed Honeysuckle.  
*L. nigra* Thunb., not of L.  
*L. brachypoda* Dec.
- a. *Hardy Species of Lonicera, belonging to the Division Chamaecerasi of the Section Xylosteum, not yet introduced* - 1055  
*L. hispida* Pall.
- C. *Berries either distinct or joined together. Corolla very gibbous at the Base. Erect bushy Shrubs.* — *Cuphanthæ* Dec. - 1055
23. *involutrata* Banks. 2 North America fig. 817, 818, 819. 1055  
The involucreted Honeysuckle.  
*Xylosteum involucreatum* Rich.

a. Hardy Species of *Lonicera* belonging to the Division *Cuphánthæ* of the Section *Xylósteum*, which are not yet introduced. - 1056

*L. gibbosa* Willd.  
*Xylósteum mexicanum* H. B. et Kunth.  
*L. Mociniána* Dec.  
*L. gibbosa* Moc. et Sesse.  
*L. Ledebourii* Eschsch.

D. Berries two on each Peduncle, joined together in one, which is bi-umbilicate at the Apex. Erect branching Shrubs. — *Isikæ* Adans. - 1056

24. *alpígena* H. Europe fig. 820, 821. 1056

The alpine Honeysuckle.  
*Caprifólium alpinum* Lam.  
*Caprifólium alpigenum* Gærtn.  
*Isika alpígena* Bórck.  
*Isica lucida* Mœnch.  
*Xylósteum alpigenum* Lodd.  
*Chamæcérasus alpígena* Delarb.  
Cherry Woodbine.  
*Heckenkirsche*, Ger.

Variety - - - 1056  
2 *sibírica* Dec.   
*L. sibírica* Vest.

25. (a.) *microphýlla* Willd. Siberia 1057  
The small-leaved Honeysuckle.  
*L. alpígena* Sievers.

26. *oblongifolia* Hook. North America fig. 822. 1057  
The oblong-leaved Honeysuckle.  
*Xylósteum oblongifolium* Goldie.

27. *cærúlea* L. Eur. f. 823, 824. 1057  
The blue-berried Honeysuckle.  
*L. villósa* Mühl.  
*Xylósteon villósum* Michx.  
*Xylósteon Solónis* Eaton.  
*L. velutína* Dec.  
*L. altaica* Pall.  
*Xylósteum cærúleum canadense* Lam.  
*Xylósteum canadense* Du Ham.  
*Caprifólium cærúleum* Lam.  
*Chamæcérasus cærúlea* Delarb.  
*L. pyrenaica* Pall.  
*L. Pallásii* Led.

28. (c.) *orientális* Lam. Asia Minor 1058  
The Oriental Honeysuckle.  
*L. caucásica* Pall.  
*L. cærúlea* Güld.  
*Chamæcérasus orientális laurifolia* Tourn.

29. *ibérica* Bieb. - - - 1058  
The Georgian Honeysuckle.  
*Xylósteon ibéricum* Bieb.

a. Hardy Species of the Genus *Lonicera* belonging to the Division *Isikæ* of the Section *Xylósteum*, not yet introduced. - 1058

*L. Webbiana* Wall.  
*L. Govaniána* Wall.  
*L. angustifolia* Wall.  
Some other Species.

V. SYMPHORICA'RPOS Dill. 1027. 1058

THE ST. PETER'S WORT.  
*Symphoricárpa* Neck.  
*Symphória* Pers.  
*Anisánthus* Willd.  
*Lonicera* sp. L.

1. *vulgáris* Michx. N. Am. f. 825. 1058  
The common St. Peter's Wort.  
*Lonicera Symphoricárpos* L.  
*S. parviflora* Desf.  
*Symphória conglomerata* Pers.  
*Symphória glomerata* Pursh.

Variety - - - 1059

2 *fóliis variegatis*   
*S. glomerata foliis variegatis* Lodd.

2. *racemósus* Michx. fig. 826. 1059  
The racemose-flowered St. Peter's Wort, or Snowberry.  
*Symphória racemosa* Pursh.  
*L. leucocárpa* Hort.

App. i. Hardy Species of *Symphoricárpos* not yet introduced. - - - 1059

*S. occidentális* Richards.  
*Wolfberry*, Amer.

VI. LEYCESTERIA Wall. 1027. 1060

THE LEYCESTERIA.

1. *formósa* Wall. Nepal f. 827. 1060  
The beautiful Leycesteria.  
*Hamèlia connata* Puerari MSS.

Rubiàceæ. - 1061

I. CEPHALA'NTHUS L. - 1061  
THE BUTTON-WOOD.

1. *occidentális* L. North America fig. 828, 829. 1061

The Western Button-wood.  
*C. oppositifolius* Mœnch.  
Swamp Globe Flower, Amer.

Variety - - - 1062  
2 *brachýpodus* Dec.

Some other Species of *Cephalánthus*. 1062

App. I. Half-hardy ligneous Plants belonging to the Order Rubiàceæ. - 1062

*Pinckneya pùbens* Michx. fig. 830.

*Pinckneya pubescens* Pers.  
*Cinchóna caroliniana* Poir.

*Serissa fœ'tida* Comm. fig. 831.

*Lycium japonicum* Thunb.  
*Lycium fœ'tidum* L. fil.  
*Lycium indicum* R. & S.  
*Dysoda fasciculata* Lour.  
*Buchónia coprosmaoides* L'Hérit.  
*Dysoda fœ'tida* Salisb.  
*Spermacoce fruticosa* Desf.

*Plócama pëndula* Ait.   
*Bartlingia scoparia* Richb.

*Phyllis Nobla* L.   
*Anthospermum æthiopicum* L.   
*Ambrària Helsteri* Walsh.

*Rùbia fruticosa* Ait.   
*R. fruticosa canadensis* Poir.

*Bouvardia Jacquini* H. B. et Kunth.   
*B. triphýlla* Hort.  
*Houstonia coccinea* Bot. Rep.

*Manettia glàbra* Cham. et Schlecht.   
*M. cordifolia* Mart.

Lobeliàceæ. 1063

*Tùpa salicifolia* G. Don.

*Lobelia Tùpa* Ait.  
*Lobelia gigantea* Sims.  
*Lobelia salicifolia* Swt.

*Lobelia arborea* Forst. ?   
*L. supérba* Cham.

Campanulàceæ. 1063

*Músschia aurea* Dumort.   
*Campanula aurea* L.

The common Bearberry.

*A'rbutus Uva-ursi* L.  
*A'rbutus buxifolia* Stokes.  
*Uva-ursi buxifolia* Sal.  
 Bear berries, Bear-whortle-berries, Eng.  
 Barentraube, Barenbeere, Ger.  
 Beerenduif, Dutch.  
 La Basserole. Fr.  
*Uva d'Orzo*, Ital.  
*Uva de Oso*, Span.  
*Uva de Ursa*, Port.  
*Uva-ursi*, in works of most old Botanists.

2. *alpina* Spreng.  Europe - 1123  
 The Alpine Bearberry.  
*A'rbutus alpina* L.

App. i. *Half-hardy Species of Arctostáphylos*  
*not yet introduced.* - - 1124

*A. polifolia* H. B. et Kunth.  
*Andrómèda ledifolia* Humb.  
*A. glaucescens* H. B. et Kunth.  
*A. pungens* H. B. et Kunth.  
*A. Hookeri* G. Don.  
*A'rbutus pungens* Hook.

XV. PERNE'TTYA Gaud.   1078. 1124

THE PERNETTYA.

1. *mucronata* Gaud.  Terra del Fuego  
 fig. 924. 1124

The mucronate-leaved Pernettya.  
*A'rbutus mucronata* L.

2. *pilosa* G. Don. Mexico - - 1124  
 The pilose, or hairy, Pernettya.  
*A'rbutus pilosa* Grah.

App. i. *Hardy Species of Pernéttya not yet*  
*introduced.* - - 1125

*P. microphylla* Gaud.  
*A'rbutus microphylla* Forst.  
*A'rbutus serpyllifolia* Lam.  
*P. Myrsinites* G. Don.  
*Andrómèda Myrsinites* Lam.

App. ii. *Half-hardy Species of Pernéttya*. 1125

*P. empetrifolia* Gaud.  
*A'rbutus empetrifolia* Lindl.  
*A'rbutus pumila* Willd.  
*Andrómèda empetrifolia* Lam.  
*P. pumila* Gaud.   
*A'rbutus pumila* Forst.  
*P. Cavanillesiana* G. Don.  
*Andrómèda prostrata* Cav.  
*P. purpurea* D. Don.  
*P. ciliaris* D. Don.

XVI. GAULTHE'RIA L.   1078. 1125

THE GAULTHERIA.

1. *procumbens* L.  North America  
 fig. 925. 1125

The procumbent Gaultheria.  
 Partridge Berry, Mountain Tea, Spring  
 Winter Green, Sm.

2. *Shallon* Pursh.  N. Am. f. 926. 1126  
 The Shallon Gaultheria.

App. i. *Half-hardy Species of Gaulthéria*. 1126

*G. fragrantissima* D. Don.   
*G. fragrans* D. Don.  
*A'rbutus laurifolia* Hamil.

App. ii. *Hardy and half-hardy Species of*  
*Gaulthéria, not yet introduced.* - 1126

*G. nummularioides* D. Don.  
*G. ciliata* Cham. et Schlecht.  
 Several other Species

XVII. EPIGÆA L.  - 1078. 1126

THE EPIGÆA.

*Memécylum* Michx.  
 May Flower, Nova Scotia.

1. *repens* L.  North America - 1127  
 The creeping Epigæa.

XVIII. PHALEROCA'RPUS G. Don.  
 - - - 1078. 1127

THE PHALEROCARPUS.

*Vaccinium* L.  
*Gaulthéria serpyllifolia* Pursh.  
*Oxycoccus* Nutt.  
*A'rbutus* Lam.

1. *serpyllifolia* G. Don.  N. Amer. 1127  
 The Wild-Thyme-leaved Phalerocarpus.

*Vaccinium hispidulum* L.  
*Gaulthéria serpyllifolia* Pursh.  
*A'rbutus filiformis* Lam.  
*Oxycoccus hispidulus* Pers.

XIX. CLE'THRA L.    1078. 1127

THE CLETHRA.

*Cuellaria* R. et P.

1. *alnifolia* L.  N. Amer. f. 927. 1128  
 The Alder-leaved Clethra.  
*C. alnifolia* var.  $\alpha$  *denudata* Ait.

2. (*a.*) *tomentosa* Lam.  N. America  
 fig. 928, 929. 1128

The downy Clethra.  
*C. alnifolia*  $\beta$  *pubescens* Ait.  
*C. incana* Pers.

3. (*a.*) *paniculata* Ait.  N. Amer. 1128  
 The panicked-flowered Clethra.

4. (*a.*) *acuminata* Michx.  N. America  
 1128

The acuminate-leaved Clethra.  
*C. montana* Bartr.

5. (*a.*) *scabra* Pers.  North America 1128  
 The rough-leaved Clethra.

App. i. *Half-hardy Species of Cléthra*. 1129

*C. arborea* Ait.  fig. 930.  
*C. ferruginea* R. et P.   
*C. tinifolia* Swartz.   
*Tinus occidentalis* L.  
 Other species of Cléthra

App. I. *Half-hardy Genera belonging to the*  
*Section Ericææ and § Andrómèdææ of the*  
*Order Ericæææ.* - - - 1129

*Agarista buxifolia* G. Don.   
*Andrómèda buxifolia* Lam.

## XX. RHODODE'NDRON L. 1078. 1130

THE RHODODENDRON, or Rose Bay.  
*Azalea* sp. of authors.  
*Rhodora* L.  
*Chamærhododendros* Tourn.  
*Rhododendron*, Fr., Ital., and Span.  
*Alpbalsam*, Ger.

### § i. Pónticum D. Don. 1131

#### 1. pónticum L. Pontus fig. 931. 1131

The Pontic Rhododendron.

Varieties - 1131

- 2 obtusum Wats.
- 3 myrtifolium Lodd.
- 4 Smithii Swt.
- 5 Lowii Gard. Mag.
- 6 azaleoides

*R. azaleoides* Desf.  
*R. p. subdeciduum* Andr.  
 Subvariety ?  
*R. p. a. odoratum* Lodd. Cat.

Nursery Varieties.

| spectabile      | - 1131 |
| violaceum       | - 1131 |

#### 2. máximum L. N. Amer. f. 932. 1134

The largest Rhododendron.

Varieties - 1131

- 2 album Hort.
  - 3 hybridum Hook.
- R. fragrans* Hort.  
*R. hybridum* Lodd.

#### 3. (m.) purpureum G. Don. N. Am. 1135

The purple-flowered Rhododendron.  
*R. máximum* γ *purpureum* Pursh.  
*R. pónticum macrophyllum* Lodd.

#### 4. Purshii G. Don. North America 1135

Pursh's Rhododendron.  
*R. máximum* β *album* Pursh.

#### 5. catawbiense Michx. North America fig. 933. 1135

The Catawba Rhododendron.

Varieties - 1135

- 2 Russelliænum Brit. Fl.-Gard.
- 3 tigrinum Hort.

#### 6. chrysanthum L. Siberia - 1135

The golden-flowered Rhododendron.  
*R. officinale* Salisb.

#### 7. caucasicum Pall. Caucasus fig. 934. 1136

The Caucasian Rhododendron.

Varieties - 1136

- 2 stramineum Hook.
- 3 pulcherrimum Lindl.
- 4 Nobleænum Hort.

#### 8. punctatum Andr. North America fig. 935. 1136

The dotted-leaved Rhododendron.  
*R. ferrugineum* var. *minus* Pers.  
*R. minus* Michx.  
*R. punctatum* var. *minus* Wats.

Variety - 1137

- 2 majus Ker.

#### 9. ferrugineum L. Eur. f. 936. 1137

The rusty-leaved Rhododendron.

Variety - 1137

- 2 album Lodd.

#### 10. (?f.) hirsutum L. fig. 937. 1137

The hairy Rhododendron.

Variety - 1137

- 2 variegatum

#### 11. setosum D. Don. Nepal - 1137

The bristly Rhododendron.

*R. macrophyllum* D. Don. - 1138

### § ii. Lepípherum D. Don. 1138

#### 12. lappónicum Wahl. N. Europe fig. 938. 1138

The Lapland Rhododendron.

*Azalea lappónica* L.  
*Azalea ferruginea* Hort.

#### 13. däuricum L. Siberia f. 939. 1138

The Dahurian Rhododendron.

Variety - 1139

- 2 atrovirens Ker.

*R. lepidotum* Wall. - 1139

### § iii. Chamæcistus D. Don. - 1139

#### 14. camtschaticum Pall. Kamtschatka fig. 940. 1139

The Kamtschatka Rhododendron.

#### 15. Chamæcistus L. Eur. f. 941. 1139

The Ground-Cistus Rhododendron.

### § iv. Pentanthèra D. Don. 1139

#### 16. flavum G. Don. (Azalea póntica L.) Levant - fig. 942. 1140

The Pontic, or common, Azalea.  
*Azalea póntica* L. Sp.  
*Azalea arborea* L. Sp., ed. 1.

Varieties and Hybrids.

## Oleaceæ. 1197

Sect. I. OLEINÆ. 1197, 1198

## I. LIGU'STRUM Tourn. 1198

### THE PRIVET.

*Troène*, Fr.

*Rainweide*, Ger.

## 1. vulgare Trag. Britain

fig. 1019, 1020. 1198

The common Privet.

*L. germanicum* Bauh.

*Prim*, *Prim-print*.

*Puine blanc*, Fr.

*Gemeine Rainweide*, Ger.

*Ligustro Olivella*, Ital.

Varieties    - 1199

### 2 leucocarpum

The white-berried Privet.

### 3 xanthocarpum

The yellow-berried Privet.

### 4 chlorocarpum

The green-berried Privet.

### 5 sempervirens fig. 1018.

The Italian, or evergreen, Privet.

*L. italicum* Mill.

### 6 variegatum

The variegated-leaved Privet.

### 7 angustifolium

The narrow-leaved Privet.

## 2. spicatum Hamilt. Nepal

fig. 1022. 1201

The spiked-flowered Privet.

*L. nepalense* Wall.

*L. lanceolatum* Herb. Lamb.

*L. nepalense* var. *glabrum* Hook.

## 3. lucidum Ait. fig. 1024, 1025. 1201

The shining-leaved Privet, or Wax Tree.

Variety - - 1201

2 floribundum Donald's Cat.

## App. i. Species of Ligustrum not yet introduced. - 1202

*L. sinense* Lour.  China.

*L. japonicum* Thunb.  Japan.

*L. latifolium* Vitm.

*L. pubescens* Wall.  Burmese Empire.

*L. bracteolatum* D. Don.  Nepal.

*L. japonicum* Hamilt.

*Phillyrea bracteolata* Herb. Lamb.

## II. PHILLY'REA Tourn. 1198. 1203

### THE PHILLYREA.

*Filaria*, Fr.

*Steinlinde*, Ger.

## 1. angustifolia L. Italy and Spain

fig. 1025. 1203

The narrow-leaved Phillyrea.

*P. obliqua* Tenore Syll.

*P. media* Tenore Fl. Neap.

Varieties  - - 1204

### 2 lanceolata Ait.

### 3 rosmarinifolia Ait. fig. 1026.

### 4 brachiata Ait.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Page<br>1258 |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | - 1258       |

  App. i. *Half-hardy ligneous or fruticose Species of Solanum.* - 1268

- Solanum Balhisii* Dunal. S. America.  
*S. betaceum* Cav. S. America.  
*S. angulatum* R. et S. Lima.  
*S. marginatum* W. Africa.  
*S. Pseudo-Capsicum* L. Madeira.  
*Capsicum Andmum* Plinii Gerard.  
*S. sodomium* L. Africa.  
*S. ligustrinum* Lodd. Chili. fig. 1107.

II. *LY'CIUM* L. 1266. 1269

THE BOX THORN.

- Jasminoides* Niss.  
*Matrimony Vine*, Amer.  
*Lycien*, Fr.  
*Bocksborn*, Ger.

1. *europæum* L. South of Europe  
 fig. 1108. 1269.

The European Box Thorn.

- L. salicifolium* Mill.  
*Jasminoides aculeatum* Michx.

Varieties - 1270

Fruit yellow

Fruit roundish

2. (e.) *bárbarum* L. S. of Europe, &c.

The Barbary Box Thorn.

- L. halimifolium* Mill.  
*L. bárbarum a vulgare* Ait.  
*The Duke of Argyll's Tea Tree*.

3. (e.) *chinense* Mill. China  
 fig. 1110, 1111. 1271

The Chinese Box Thorn.

- L. bárbarum β chinense* Ait.  
*L. bárbarum* Lour.  
*L. ovatum* N. Du Ham.

4. (e.) *Trewianum* G. Don. China 1271

Trew's Box Thorn.

- L. bárbarum* Lam.  
*L. chinense* N. Du Ham.

5. (e.) *ruthenicum* Murr. Siberia  
 fig. 1112. 1271

The Russian Box Thorn.

- L. tatáricum* Pall.  
*Lycien de la Russie*, Fr.

Variety - 1272

2 *cáspicum* Pall.

6. (e.) *lanceolatum* Poir. S. Europe 1272

The lanceolate-leaved Box Thorn.

- L. europæum β* Dec.

7. (e.) *turbinatum* Du Ham. China  
 fig. 1115. 1272

The turbinate-fruited Box Thorn.

- L. halimifolium* Mill.  
*L. bárbarum β* Dec.

8. (?e.) *tetrándrum* Thunb. Cape of  
 Good Hope - 1272

The tetrandrous-flowered Box Thorn.

9. (?e.) *Sháwi* Roem. Barbary - 1273

Shaw's Box Thorn.

- L. europæum* Mill.

10. *àfrum* L. Spain f. 1114, 1115. 1273  
 The African Box Thorn.

III. *CRABO'WSKIA* Schlecht. 1266. 1273

THE CRABOWSKIA.

- Lycium* sp. L.  
*Ehretia* sp. L'Hérit.

I. *boerhaaviæfolia* Schlecht. South  
 of Brazil - fig. 1116. 1274

The Boerhaavia-leaved Crabowskia.

- Lycium boerhaaviæfolium* L.  
*Ehretia halimifolia* L'Hérit.  
*Lycium heterophyllum* Murr.  
*Jasminoides spinosum* Du Ham.  
*Lycium paniculæ*, Fr.

App. I. *Half-hardy ligneous Plants belonging to the Order Solanaceæ.* - 1274

*Nicotiana glauca* Grah. Buenos Ayres. fig. 1118.

*Brugmansia sanguinea* R. et P. fig. 1117.

*B. bicolor* Pers.

*B. suaveolens* Willd. Peru. fig. 1120.

*Datura arborea* Hort.

*Solanandra grandiflora* L. Jamaica.

*Cestrum nocturnum* L. E. Indies. fig. 1119.

*C. Parqui* L. Chili. fig. 1122.

*Vestia lycioides* Willd. Chili. fig. 1121.

*Cantua ligustrifolia* Juss.

*Scrophulariaceæ.* 1276

I. *BU'DDLEA* L. 1276

THE BUDDLEA.

1. *globosa* L. Chili f. 1123, 1124. 1276

The globe-flowered Buddlea.

- B. globiflora* N. Du Ham.  
*B. capitata* Jacq.  
*Pálquin Feuillée* It.  
*Buddleia globulæur*, Fr.  
*Kopftragende Budleje*, Ger.

App. i. *Half-hardy Species of Búddlea.* 1277

*B. salvifolia* Lam. C. G. H.

*Lantana salvifolia* L.

*B. paniculata* Wall. Nepal.

*B. saligna* Willd. C. G. H.

*B. crispa* Royle. Himalayas.

App. I. *Half-hardy ligneous Plants of the Order Scrophulariaceæ.* - 1277

*Halleria lucida* L. C. G. H. fig. 1125.

*Maurandya semperflorens* Jacq. Mexico.

*M. Barclayana* Bot. Reg. Mexico.

*Mimulus glutinosus* Willd. California.

*Anthocercis viscosa* R. Br. New Holland.

*Calceolaria integrifolia* L. Chili.

*C. rugosa* Fl. Per. Chili.

*C. sessilis* Hort. figs. 1127, 1128.

*Veronica decussata* Ait. Falkland Islands. figs. 1129, 1130.

*Celsia lanata* Jacq. fig. 1226.

*Capraria lanceolata* L. C. G. H.

*Fraxinia salicifolia* Bot. Mag.

*Alonsoa* R. et P.

*Angelonia* H. B. et Kunth.

*Lophospermum* Don.

*Rhodochiton* Zucc.

*Nycteria* D. Don.

*Labiaceæ.* 1278

*Satureja montana* L. South of Europe  
 fig. 1131. 1278

*S. capitata* Willd. Levant - 1278

*Thymus vulgaris* L. South of Europe  
 fig. 1132. 1278

*T. Mastichina* L. Spain 1278

*T. grandiflorus* Hort.

Polygonaceæ. 1292

- I. TRAGOPYRUM Bieb. 1292

THE GOAT WHEAT.  
*Polygonum* L.

1. lanceolatum Bieb. Siberia  
fig. 1161. 1292

The lanceolate-leaved Goat Wheat.  
*Polygonum frutescens* Willd.  
*Strauchartiger Knöterig*, Ger.

2. buxifolium Bieb. Siberia f. 1162. 1293

The Box-leaved Goat Wheat.  
*Polygonum crispulum* var.  $\alpha$  Sims.  
*P. caucasicum* Hoffmannsegg.

3. polygamum Spr. Carolina f. 1163. 1293

The polygamous-seed Goat Wheat.  
*Polygonum polygamum* Vent.  
*P. parvifolium* Nutt.

*T. pungens* Bieb.  
*T. glaucum* Spr.  
*T. grandiflorum* Bieb.

- II. ATRAPHA'XIS L. 1292. 1294

THE ATRAPHAXIS.

1. spinosa L. Levant fig. 1164. 1294

The spine-branched Atraphaxis.  
*Atriplex orientalis, frutex aculeatus, flore pulchro* Tourn.

2. undulata L. Cape of Good Hope 1295

The waved-leaved Atraphaxis.

- III. CALLIGONUM L. 1292. 1295

THE CALLIGONUM.  
*Pallasia* L.  
*Pterococcus* Pall.

1. Pallasia L'Hérit Caspian Sea  
figs. 1165, 1166. 1295

Pallas's Calligonum.  
*Pterococcus aphyllus* Pall. Voy.  
*Calligonum polygonoides* Pall. Itin.  
*Pallasia caspica* L.  
*Pallasia Pterococcus* Pall. Fl. Ross.  
*Caspischer Hackenknopf*.

*C. comosum* L'Hérit. - - - - - 1296  
*C. Panderi* L'Hérit. - - - - - 1296

- App. I. Half-hardy Species of Polygonaceæ. 1296

*Brunnichia cirrhosa* Gaertn. Carolina.  
*Rumex Lunaria* L. Canaries. fig. 1167.  
*Polygonum adpressum* R. Br. Van Diemen's Land.

Lauraceæ. 1296

- I. LAU'RUS Plin. - - - 1296

THE LAUREL, or Bay, Tree.  
*Sassafras* and *Benzoin*, C. G. Von Esenbeck.  
*Daphnē*, Greek.

A. Plants evergreen; hardy.

1. nobilis L. S. Europe pl. 215. 1297

The noble Laurel, or Sweet Bay.  
*Laurus Camer*.  
*L. vulgaris* Bauh.  
*Laurier commun, Laurier franc, Laurier d'Apollon, Laurier à sauce*, Fr.  
*Gemeine Lorbeer*, Ger.

Varieties - - - 1297

- 2 undulata Mill.   
3 salicifolia Swt.   
*L. n. angustifolia* Lodd. Cat  
4 variegata Swt.   
*L. n. fol. var.* Lodd. Cat.  
5 latifolia Mill.   
6 crispa Lodd. Cat.   
7 flore pleno N. du Ham.

- B. Plants evergreen ; half-hardy.
2. *carolinensis* Catesb. ♀ North America  
fig. 1168, 1169. 1299  
The Carolina Laurel, or Red Bay.  
*L. Borbonia* L. sp.  
*L. axillaris* Lam.  
*Borbonia* sp. Plum.  
*Persea Borbonia* Spreng.  
The broad-leaved Carolina Bay.  
*Laurier rouge*, *Laurier Bourbon*, *Laurier de Caroline*, Fr.  
*Carolinischer Lorbeer*, *Rother Lorbeer*, Ger.  
Varieties ♀ - - 1299  
2 *glabra* Pursh. ♀  
3 *pubescens* Pursh. ♀  
4 *obtusa* Pursh. ♀
3. *Catesbiانا* Michx. ♂ Georgia - 1300  
Catesby's Laurel.
4. *aggregata* Sims. ♂ China f. 1170. 1300  
The grouped-flowered Laurel.  
*L. foetens* Ait. ♀ Madeira. - - 1301  
*L. madeirensis* Lam.  
*Persea foetens* Spreng.  
*L. Myrrha* Lour. China - - 1301  
*L. indica* L. ♀ India - - 1301
- C. Leaves deciduous.
5. *Sassafras* L. ♀ North America  
pl. 216, 217. 1301  
The Sassafras Laurel, or Sassafras Tree.  
*Cornus mas odorata, folio trifido, margine plano*, *Sassafras dicta*, Pluk.  
*Sassafras arbor*, ex Florida, *ficulneo folio*, Bauh.  
*Sassafras* sp. C. G. Nees Von Esenbeck.  
*Persea Sassafras* Spreng.  
*Laurier Sassafras*, Fr.  
*Sassafras Lorbeer*, Ger.  
Varieties ♀ - - 1301  
The red ♀  
*L. subgenus Euósmus* Nutt.  
*Sassafras* L.  
The white ♀  
*L. c. albidula* Nutt.
6. *Benzoin* L. ♂ Virginia f. 1171. 1303  
The Benzoin Laurel, or Benjamin Tree.  
*Arbor virginiana citrea vel limoni folio*, *benzoinum fundens*, Comm.  
*Laurus aestivalis* Wagh.  
*Pseudo Benzoin* Michx.  
*Euósmus Benzoin* Nutt.  
*Benzoin* sp. C. G. Nees Von Esenbeck.  
*Spice Bush*, *Spice Wood*, *Wild Allspice*, Amer.  
*Laurier faux Benzoin*, Fr.  
*Benzoin Lorbeer*, Ger.
7. (B.) *Diospyrus* Pers. ♂ Virginia  
fig. 1172. 1304  
The Diospyrus-like Laurel.  
*L. Euósmus Diospyrus* Nutt.  
*L. diospyroides* Michx.  
? *L. melissæfolia* Walter.
8. (B.) *aestivalis* L. ♂ Virginia 1304  
The summer Laurel, or Willow-leaved Bay.  
*L. enervia* Mill.  
*L. Euósmus aestivalis* Nutt.  
*Pond Bush* Amer.  
*Sommer Lorbeer*, Ger.
9. *geniculata* Michx. ♂ Virginia  
fig. 1173. 1305  
The knee-flexed-branched Laurel.  
*L. Euósmus geniculata* Nutt.  
*L. aestivalis* Willd.

## App. I. Half-hardy Species of Lauraceæ. 1305

- Cinnamomum Camphora* Swt. ♀ □ Japan. fig. 1174.  
The Camphor Tree.  
*Laurus Camphora* L.  
*C. verum* Swt. ♀ □ Ceylon. fig. 1175.

 THE *NYSSA*, or *Tupelo Tree*.
1. *biflora* Michx. ♀ Virginia  
 pl. 218. fig. 1195, 1196. 1317  
 The twin-flowered *Nyssa*.  
*N. aquatica* L. sp.  
*N. caroliniana* L.  
*N. integrifolia* Ait.  
*N. pedunculis unifloris* Gron.  
*Mountain Tupelo* Mart.  
*Gum Tree, Sour Gum Tree, Peperidge*, Amer.
2. (b.) *villosa* Michx. ♀ North America  
 fig. 1197, 1198. 1317  
 The hairy-leaved *Nyssa*.  
*N. sylvatica* Michx.  
*N. multiflora* Wagh.  
*N. montana* Hort.  
*N. pedunculis multifloris* Gron.  
*Sour Gum Tree, Black Gum, Yellow Gum*, Amer.  
*Haariger Tulpelobaum*, Ger.
- m

3. *cándicans* Michx. ♀ Carolina Page  
fig. 1199. 1318  
The whitish-leaved Nyssa, or Ogechee Lime Tree.  
*N. capitata* Walt.  
*N. coccinea* Bartr.  
*Sour Tupelo Tree, Wild Lime.*  
*Weisslicher Tulpelobaum, Ger.*

4. *grandidentata* Michx. ♀ North America fig. 1200, 1201. 1319  
The deeply-toothed-leaved Nyssa, or Large Tupelo Tree.  
*N. tomentosa* and *N. angulizans* Michx.  
*N. denticulata* Ait.  
*N. angulosa* Poir.  
*N. uniflora*, Wangh.  
*Wild Olive, Amer.*  
*Virginian Tupelo, Mart.*

II. *OSYRIS* L. ♂ - - 1316. 1320  
THE OSYRIS, or Poet's Cassia.  
*Cassia Camer.*

1. *álba* L. ♂ Italy - fig. 1202. 1320  
The white-flowered Osyris.  
*O. foliis lineáribus acutis* Læfl.  
*O. frutescens bacctifera* Bauh.  
*Cassia poetica Monspeliensium* Cam.  
*Cassia Latiniarum* Alp.  
*Cassia Monspelií dicta* Gesn.  
*Weisse Osyris, Ger.*

*Elæagnaceæ.* ♀ ♂ ♂ □ 1320

I. *ELÆA'GNUS* Tourn. ♀ ♂ ♂ □  
1320, 1321  
THE ELÆAGNUS, Oleaster, or Wild Olive Tree.  
*Chalef, Fr.*  
*Wilde Oelbaum, Ger.*

1. *horténsis* Bieb. ♀ South of Europe pl. 219. fig. 1203. 1321.  
The Garden Elæagnus.  
*E. angustifolia* L.  
*E. inermis* Mill.  
*E. argenteus* Moench.  
*E. orientalis* Delisle.  
? *E. argentea* Wats.  
*Jerusalem Willow.*  
*Olivier de Bohème, Chalef à Feuilles étroites, Fr.*  
*Schmalblättriger Oleaster, Ger.*

Varieties ♀ - - - 1322

- 1 *angustifolia* Bieb. ♀  
*E. angustifolia* L.  
2 *dactyliformis* ♀  
3 *orientalis* ♀  
*E. orientalis* L.  
4 *spinosa* ♀  
*E. spinosa* L.

2. *argentea* Ph. ♂ Hudson's Bay fig. 1204. 1323  
The silver-leaved Elæagnus.  
*Missouri Silver Tree, U. S. of N. Amer.*

App. i. *Half-hardy Species of Elæagnus.* 1324

- E. conferta* Roxb. ♂ □ Nepal.  
*E. arborea* Roxb. ♀ □ Nepal.  
*E. latifolia* L. ♂ □ East Indies.  
*E. salicifolia* ? D. Don. ♂ □ fig. 1205.

II. *HIPPO'PHAE* L. ♀ ♂ 1321. 1324 Page  
THE HIPPOPHAE, Sea Buckthorn, or Sallow-thorn.

*Rhamnoides* Tourn.  
*Argoussier, Fr.*  
*Haffdorn, Sanddorn, Ger.*  
*Espino amarillo, Span.*

1. *Rhamnoides* L. ♀ ♂ Europe pl. 220. fig. 1206. 1324  
The Buckthorn-like Hippophae.  
*Rhamnoides florifera salicis folio*, Tourn.  
*Rhamnoides fructifera* Ray.  
*Argoussier faux Nerprun, Fr.*  
*Weidenblättriger Sanddorn, Ger.*  
*Arve, Saule Épineux, Alps of Switzerland.*

Varieties ♀ ♂ - - 1325  
2 *angustifolia* ♀ ♂  
3 *sibirica* ♀ ♂  
*H. sibirica* Lodd. Cat.

2. *salicifolia* D. Don. ♀ ♂ Nepal fig. 1207. 1326  
The Willow-leaved Hippophae.  
*H. conferta* Wall.

III. *SHEPHERDIA* Nutt. ♀ ♂  
1321. 1327  
THE SHEPHERDIA.  
*Hippophae* L.

1. *argentea* Nutt. ♂ ♀ North America fig. 1208. 1327  
The silvery-leaved Shepherdia.  
*Hippophae argentea* Pursh.  
*Missouri Silver Leaf, Buffalo Berry Tree, Amer.*  
*Rabbit Berry, Beef Suet Tree, American Indians.*  
*Graisse de Buffle, Buffalo Fat, French Traders.*

2. *canadensis* Nutt. ♂ North America fig. 1209. 1327  
The Canadian Shepherdia.  
*Hippophae canadensis* L.

*Aristolochiaceæ.* ♂ ♂ □ ♀ □ 1328

I. *ARISTOLO'CHIA* L. ♂ ♂ □ ♀ □  
1328

THE BIRTHWORT.  
*Aristolochie, Fr.*  
*Osterluzey, Ger.*

1. *sipho* L'Herit. ♂ N. Am. f. 1210. 1329  
The Siphon-like, or Tube-flowered, Birthwort.  
*A. macrophylla* Lam.  
*Aristolochie Syphon, Fr.*  
*Grossblättrige Osterluzey, Ger.*  
*Pipe Vine, or Birthwort, Amer.*

2. *tomentosa* Sims. ♂ North America fig. 1211. 1329  
The tomentose Birthwort.

App. i. *Half-hardy Species of Aristolochia.* 1329

- A. sempervirens* L. ♂ □ Candia.  
*A. glauca* Desf. ♂ □ Barbary.  
*A. altissima* Desf.  
*A. caudata* Desf.  
*A. trilobata* Willd. South America.

## French Varieties

1378

- L'Orme à Feuilles larges et rudes.  
 L'Orme Tell, l'Orme Tilleul, l'Orme de Hollande.  
 The British, or Lime Tree, Elm.  
 L'Ormeille, l'Orme nain.  
 The dwarf Elm.  
 L'Orme à Feuilles lisses et glabres.  
 The shining smooth-leaved Elm.  
 Le petit Orme à Feuilles panachées de blanc.  
 L'Orme à Feuilles lisses panachées de blanc.  
 The shining silvery-leaved Elm.  
 Le petit Orme à Feuilles panachées de jaune.  
 The dwarf golden-leaved Elm.  
 L'Orme à petites Feuilles, l'Orme mâle, l'Orme pyramidal.  
 The small-leaved Elm.  
 L'Orme à très-grandes Feuilles, l'Orme femelle, l'Orme de Trianon.  
 The large-leaved Elm.  
 L'Orme de Hollande à grandes Feuilles panachées.  
 The variegated Dutch Elm.  
 L'Orme tortillard.  
 U. tortuosa Lodd. Cat.  
 The twisted Elm.

2. (c.) suberosa Moench. Ț England  
pl. 233. fig. 1240. 1395

The cork-barked Elm.

- U. campestris Woods.  
 U. campestris and Theophrasti Du Ham.  
 U. vulgatissima folio lato scabra Ger. Emac.  
 U. montana Cam.  
 Common Elm Tree, Hunt Evel.  
 L'Orme Liège, l'Orme-fungeux, Fr.

## Varieties Ț

- 1395

## 1 vulgaris Ț

The Dutch cork-barked Elm.

- U. suberosa Hort. Dur.

## 2 foliis variegatis Lodd. Cat. Ț

- U. suberosa variegata Hort. Dur.

## 3 alba Ț

- U. suberosa alba Masters.

## 4 erecta Lodd. Cat. Ț

## 5 var. Ț

The broad-leaved Hertfordshire Elm, Wood.

## 6 var. Ț

The narrow-leaved Hertfordshire Elm, Wood.

3. (c.) major Sm. Ț England  
pl. 234, 235. fig. 1241. 1395

The greater, or Dutch cork-barked, Elm.

- U. hollandica Mill.  
 U. major hollandica, &c., Pluk.  
 U. major, ampliore folio, &c., Du Ham.  
 Tilia mas Matth.  
 U. latifolia Michx.

## 4. carpinifolia Lindl. Ț England - 1396

The Hornbeam-leaved Elm.

## 5. effusa Willd. Ț England

pl. 236, 237. fig. 1242. 1397

The spreading-branched Elm.

- U. ciliata Ehrh.  
 U. pedunculata Lam.  
 U. octandra Schk.  
 U. folio latissimo, &c., Buxb.  
 U. laevis Pall.  
 L'Orme pédonculé, Fr.

## 6. montana Bauh. Ț England

fig. 1243, 1244. 1398

The mountain, Scotch, or Wych, Elm.

- U. glabra Huds.  
 U. effusa Sibth.  
 U. scabra Mill.  
 U. nuda Ehrh.  
 U. campestre Willd.  
 Wych Hazel of old authors.

## Varieties Ț

- 1398

## A. Timber Trees.

## 1 vulgaris Ț

## 2 rugosa Masters. Ț

- U. rugosa Lodd. Cat.

## 3 major Masters. Ț pl. 238.

## 4 minor Masters. Ț

## 5 cebennensis Hort. Ț

The Cevennes Elm.

## 6 nigra Ț

The black Irish Elm.

- U. nigra Lodd. Cat.

## 7 australis Hort. Ț

## B. Ornamental or curious Varieties.

## 8 pendula Ț pl. 239.

- U. pendula Lodd. Cat.  
 U. glabra decumbens Hort. Dur.  
 U. horizontalis Hort.  
 U. rubra Hort. Soc. Gard.

## 9 fastigiata Hort. Ț pl. 240.

- U. glabra replicata Hort. Dur.  
 U. Fordii Hort.  
 U. exoniensis Hort.

## 10 crispa Ț

The curled-leaved Elm.

- ? U. crispa Willd.

## Other Varieties.

## 7. (m.) glabra Mill. Ț Eng. f. 1245. 1403

The smooth-leaved, or Wych, Elm.

- U. montana  $\beta$  Fl. Br.  
 U. folio glabro Ger. Emac.  
 U. campestris var. 3. With.  
 The feathered Elm.

## Varieties Ț

- 1404

## A. Timber Trees.

## 1 vulgaris Ț

The common smooth-leaved Elm.

## 2 vegeta Ț

- U. montana vegeta Hort. Soc. Gard.  
 U. americana Masters.  
 The Huntingdon Elm, the Chichester Elm, the American Elm,  
 ? the Scampston Elm.

## 3 var. Ț

The Scampston Elm.

## 4 major Ț

- U. glabra major Hort. Dur.  
 The Canterbury Seedling.

## 5 glandulosa Lindl. Ț

## 6 latifolia Lindl. Ț

## 7 microphylla H. S. Ț

- ? U. g. parvifolia Hort. Soc. Gard.

Page

2. (p.) *Pichta* ♀ Altai Mountains 2338  
The Pitch Silver Fir.  
*Pinus Pichta* Lodd. Cat.  
*Pinus sibirica* Hort.  
*Abies sibirica* Led., Lindl. in Penny Cyc.  
*Abies Pichta* Fischer.  
*Pichta*, Russ.

3. balsamea L. ♀ North America  
fig. 2240, 2241. 2339  
The Balm of Gilead, or American, Silver Fir.  
*Pinus balsamea* L., &c.  
*Abies balsamea* Marsh.  
*Abies Tâxi folio*, &c., Hort. Angl., &c.  
*Abies balsamifera* Michx.  
Balsam Fir.  
Le Beaume de Giléad, le Sapin Baumier de  
Giléad, Fr.  
Balsam Fichte, Balsam Tanne, Ger.

- 2339

Variety ♀  
2 longifolia Booth. ♀  
The long-leaved Balm of Gilead Silver  
Fir.

4. (b.) Fràseri Ph. ♀ Carolina  
fig. 2243, 2244. 2340  
Fraser's, or the double Balsam, Silver Fir.  
*Pinus Fràseri* Ph., Lamb.  
*Abies Fràseri* Lindl. in Penny Cyc.

5. grândis Dougl. ♀ N. W. America  
fig. 2245, 2246. 2341  
The great Silver Fir.  
*Pinus grândis* Dougl. MS., Lamb.  
*Abies grândis* Lindl. in Penny Cyc.  
The great Californian Fir.

6. amâbilis Dougl. ♀ ? California  
fig. 2247, 2248. 2342  
The lovely Silver Fir.  
*Pinus amâbilis* Dougl. MS.

7. nóbilis Dougl. ♀ North America  
fig. 2249, 2250. 2342  
The noble, or large-bracted, Silver Fir.  
*Pinus nóbilis* Dougl. MS., Lamb.  
*Abies nóbilis* Lindl. in Penny Cyc.

8. Webbiàna Wall. ♀ Nepal  
fig. 2251, 2252, 2253. 2344  
Webb's purple-coned Silver Fir.  
*Pinus Webbiàna* Wall., Lamb. Pin.  
*Pinus spectâbilis* Lamb. Monog.  
*Abies Webbiàna* Lindl. in Penny Cyc.  
Chilrow, and the Oonum, or purple-coned  
Fir, in the Himalayas.

9. Pindrow Royle ♀ Kamaon  
fig. 2254, 2255. 2346  
The Pindrow, or tooth-leaved, Silver Fir.  
*Pinus Pindrow* Royle, Lamb.  
*Tâzus Lambertiana* Wall. Cat.  
Pindrow, and sometimes Morinda, in the  
Himalayas.

10. bracteata D. Don. ♀ California  
fig. 2256. 2348  
The leafy-bracted Silver Fir.  
*Pinus bracteata* Lin. Trans., Lamb.  
*Pinus venusta* Dougl. in Comp. to Bot. Mag.

Page

11. religiosa H. et K. ♀ Mexico  
fig. 2257. 2349  
The sacred Mexican Silver Fir.  
*Pinus religiosa* Humb. et Kunth, &c.  
*Abies religiosa* Lindl. in Penny Cyc.

? P. hirtella - - - 2349  
*Abies hirtella* Lindl. in Penny Cyc.  
*Pinus hirtella* Thunb. et Kunth.

IV. LA'RIX Tourn. ♀ 2105. 2350  
THE LARCH.  
*Pinus* L. and others.  
*Abies* Rich.  
Melèze, Fr.  
Lerchenbaum, Ger.  
Laricio, Ital.

1. europæa Dec. ♀ South of Europe  
fig. 2258. 2350  
The European, or common, Larch.  
*Pinus Larix* L., &c.  
*Abies* Lin. Hort. Cliff.  
*Larix decidua* Mill. Dict.  
*Larix folio deciduo*, &c., Bauh.  
*Larix* Bauh. Pin., Dod., Cam.  
*Abies Larix* Lam.  
Melèze commune, Fr.  
Lörche, Lorcher-Fichte, Gemeiner Lerchen-  
baum, Terbentinbaum, Europäische Ce-  
der, Weisser Lerchenbaum, Ger.

- 2350

Varieties ♀  
1 communis Laws. ♀  
The common European Larch.  
2 laxa Laws. ♀  
The loose-headed European Larch.  
3 compàcta Laws. ♀  
The compact, or crowded-branched,  
Larch.  
4 pëndula Laws. ♀  
The weeping-branched European  
Larch.  
The weeping Larch from the Tyrol,  
Hort. Trans.  
5 rèpens Laws. ♀  
The creeping-branched European  
Larch.  
6 flore rubro ♀  
The red, or pink, flowered common  
Larch.  
7 flore albo ♀  
The white-flowered Larch from the  
Tyrol.  
8 sibirica ♀  
The Russian Larch.  
*L. sibirica* Fisch.  
? *L. archangélica* Laws.  
*L. rössica* Sab.  
*Pinus L. sibirica* Lodd. Cat.  
9 dahùrica ♀  
The Dahurian Larch.  
*L. dahùrica* Laws.  
10 intermèdia ♀  
The intermediate, or Altaian, Larch.  
*L. intermèdia* Laws.  
*Pinus intermèdia* Lodd. Cat.

- 2353

Other Varieties -  
*L. Fràseri* Comp. to Bot. Mag.

2. americana Mr. ♀ N. America 2399  
The American Larch.  
*Pinus laricina* Du Roi.  
*Pinus microcarpa* W.  
*Abies microcarpa* Poir.  
Hackmatack, Amer.  
Tamarack, by the Dutch in New Jersey.  
E'pinette rouge, in Canada.
